X. DEMAND FOR JURY TRIAL.....	65

1 **I. INTRODUCTION**

2 1. This complaint sets forth how the regularly conducted business practices of
3 defendant Oracle America, Inc. (“Oracle”) amount to a deliberate and purposeful surveillance of
4 the general population via their digital and online existence. In the course of functioning as a
5 worldwide data broker, Oracle has created a network that tracks in real-time and records
6 indefinitely the personal information of hundreds of millions of people. Oracle sells this detailed
7 personal information to third parties, either directly, or through its “ID Graph” and other related
8 products and services derived from this data. The proposed Classes herein lack a direct
9 relationship with Oracle and have no reasonable or practical basis upon which they could legally
10 consent to Oracle’s surveillance.

11 2. The named Plaintiff class representatives are informed and concerned citizens who
12 believe that the unregulated worldwide data marketplace abrogates the privacy and autonomy of
13 the people and threatens core principles essential for democratic self-rule. Plaintiffs bring this
14 action to enforce their fundamental right to privacy, seek redress and compensation for the
15 financial, dignitary, reputational, and relational harms Oracle has caused, and obtain a ruling that
16 Oracle’s conduct is unlawful and therefore must stop. The law, as alleged below, entitles Plaintiffs
17 and the proposed Classes to these remedies.

18 **II. THE PARTIES**

19 3. Plaintiff Michael Katz-Lacabe resides in San Leandro, California. Mr. Katz-
20 Lacabe is a privacy rights activist. He is the founder of the Center for Human Rights and Privacy,
21 a project dedicated to the promotion of human rights and privacy in the United States, focusing on
22 the use of surveillance technologies by local police and other government agencies.¹ Mr. Katz-
23 Lacabe is also an active member of Oakland Privacy, a grassroots citizens’ coalition that “works
24 regionally to defend the right to privacy and enhance public transparency and oversight regarding
25 the use of surveillance techniques and equipment.”² Mr. Katz-Lacabe has been frequently cited by

26 ¹ *About CEHRP*, The Center for Human Rights and Privacy (2014), [https://www.cehrp.org/about-](https://www.cehrp.org/about-cehrp/)
27 [cehrp/](https://www.cehrp.org/about-cehrp/) [https://perma.cc/9T3N-ZH5W].

1 reporters for his privacy work related to the use of license plate readers by local police,³ which has
 2 been referenced by advocacy organizations in their California Supreme Court *Amicus Curiae*
 3 briefs.⁴

4 4. Mr. Katz-Lacabe, like most members of modern society, must use the Internet to
 5 conduct routine affairs of daily life. On May 4, 2022, despite taking significant steps to maintain
 6 his online and offline privacy, Mr. Katz-Lacabe received a document from Oracle indicating
 7 Oracle had tracked, compiled, and analyzed his web browsing and other activity and thereby
 8 created an electronic profile on him. On information and belief, Oracle continues to track
 9 Mr. Katz-Lacabe's internet and offline activity, enrich the profile of him as described below, and
 10 make his personal information available to third parties without his consent. On information and
 11 belief, Mr. Katz-Lacabe has visited websites where his electronic communications were
 12 intercepted by the use of Oracle JavaScript code, as described below.

13 5. Plaintiff Dr. Jennifer Golbeck resides in Sugarloaf Key, Florida. Dr. Golbeck is an
 14 associate professor at the University of Maryland in College Park and is Director of the Social
 15 Intelligence Lab. She is an expert in social networks, social media, privacy, and security on the
 16 web. As described in her Wikipedia entry, Dr. Golbeck "is known for her work on computational
 17 social network analysis. She developed methods for inferring information about relationships and
 18 people in social networks. Her models for computing trust between people in social networks are
 19 among the first in the field . . . [Dr.] Golbeck has received attention for her work on computing

1 personality traits and political preferences of individuals based on their social network profiles.
 2 Her presentation at TEDxMidatlantic, discussing the need for new methods of educating users
 3 about how to protect their personal data, was selected as one of TED's 2014 Year in Ideas talks."⁵
 4 Dr. Golbeck's TED talk, "The curly fry conundrum: Why social media 'likes' say more than you
 5 might think," has received over 300,000 views on YouTube.⁶

6 6. Dr. Golbeck, like most members of modern society, must use the Internet to
 7 conduct routine affairs of daily life. Despite taking precautions to keep her personal information
 8 from being collected by third parties, Dr. Golbeck discovered Oracle tracking devices on multiple
 9 of her computers that she regularly uses for internet browsing and other activities. Additionally,
 10 on March 10, 2022, Dr. Golbeck received from Oracle a document indicating Oracle had tracked,
 11 compiled, and analyzed her web browsing and other activity and thereby created an electronic
 12 profile on her. On information and belief, Oracle continues to track Dr. Golbeck's internet and
 13 offline activity, enrich the profile of her as described below, and make her personal information
 14 available to third parties without her consent. On information and belief, Dr. Golbeck visited
 15 websites where her electronic communications were intercepted by the use of Oracle JavaScript
 16 code, as described below.

17 7. Plaintiff Dr. Johnny Ryan resides in Dublin, Ireland. Dr. Ryan is a Senior Fellow at
 18 the Irish Council for Civil Liberties, and a Senior Fellow at the Open Markets Institute. His work
 19 as a privacy advocate and scholar focuses on surveillance, data rights, competition/antitrust, and
 20 privacy. His previous roles include Chief Policy Officer at Brave and Chief Innovation Officer at
 21 The Irish Times. His regulatory interventions and commentary appear in *The New York Times*, *The*
 22 *Economist*, *Die Zeit*, *Wired*, *Le Monde*, *The Financial Times* and other leading media. Dr. Ryan
 23 has testified at the US Senate and European Parliament, advises on data legislation, and is the
 24 author of two books, including "A History of the Internet and the Digital Future." He is a Fellow
 25

 27

28 ⁶ TED, *Jennifer Golbeck: The Curly Fry Conundrum: Why Social Media "Likes" Say More Than You might Think*, YouTube (Apr. 3, 2014), <https://www.youtube.com/watch?v=hgWie9dnssU> [https://perma.cc/89JD-556N].

1 of the Royal Historical Society, and a member of the World Economic Forum’s expert network on
2 media, entertainment and information.

3 8. Mr. Ryan, like most members of modern society, must use the Internet to conduct
4 routine affairs of daily life. At least until September 2020, Oracle tracked and compiled
5 information on Internet users in the European Union and the United Kingdom using data derived
6 from “third-parties,” as described in more detail below.⁷ As noted in the press, Oracle’s
7 announcement that it would no longer make this functionality available in Europe and the U.K.
8 came “just weeks after Oracle and rival data broker Salesforce were named in a class-action
9 lawsuit in both the U.K. and the Netherlands that could result in the two companies having to pay
10 up to \$11.7 billion in fines under GDPR rules.”⁸ Oracle publicly described that lawsuit as a
11 “shake-down”—yet it purported to cease certain of the practices complained of in that lawsuit only
12 weeks after it was filed.⁹

13 9. On information and belief, at least until September 2020, Oracle tracked Dr. Ryan’s
14 internet activity, created profiles of him as described below, and made his personal information
15 available to third parties without his consent, all during the class period.

16 10. **Defendant Oracle America, Inc.** (“Oracle” or “Defendant”) is a United States
17 public corporation incorporated under the laws of the State of Delaware and is registered with the
18 State of California pursuant to California Civil Code § 1798.99.80 as a “data broker” residing at
19 500 Oracle Pkwy, Redwood City, California. On information and belief, Redwood City,
20 California is, or has been for a majority of the class period, the principle place of business for
21 Oracle and until at least December 2020, was the sole location it listed as its residence.

1 **III. JURISDICTION AND VENUE**

2 11. This Court has original jurisdiction over this matter pursuant to 28 U.S.C. § 1331 as
3 it arises under the laws of the United States. This Court also has subject matter jurisdiction over
4 this action pursuant to 28 U.S.C. §§ 1332 and 1367 because this is a class action in which the
5 matter or controversy exceeds the sum of \$5,000,000, exclusive of interest and costs, and in which
6 some members of the proposed Classes are citizens of a state different from Defendant.

7 12. This Court has personal jurisdiction over Defendant because Defendant conducts
8 substantial business within this District and throughout the State of California, and was
9 headquartered in Redwood City, California, for at least a substantial portion of the class period.

10 13. Venue properly lies with this Court pursuant to 28 U.S.C. § 1391(b)(1) and (b)(2),
11 because Plaintiff Katz-Lacabe resides within this District and because Oracle maintains substantial
12 business operations in this District, and because a substantial part of the events or omissions giving
13 rise to the claims described herein occurred in this District.

14 **IV. CHOICE OF LAW**

15 14. California law governs the substantive legal issues in this case. The State of
16 California has a significant interest in regulating the conduct of businesses operating within its
17 borders. California, which seeks to protect the rights and interests of California and all residents
18 and citizens of the United States against a company doing substantial business in California, has a
19 greater interest in the claims of Plaintiffs and Class members than any other state or country and is
20 most intimately concerned with the claims and outcome of this litigation.

21 15. Until at least December 2020, Oracle's principal place of business is, or has been
22 for the majority of the class period, Redwood City, California, where it is registered a data broker
23 under California law, where it is functioning, during the majority of the relevant time period, as
24 the "nerve center" of its business activities—the place where its high-level officers direct, control,
25 and coordinate the corporation's activities, including its marketing, software development, and
26 major policy, financial, and legal decisions.

27 16. Oracle's privacy-invasive conduct as described herein emanated from, and was
28 conceived and executed in, California.

17. Application of California law with respect to Plaintiffs' and Class members' claims is reasonable and fundamentally fair because California has a state interest in the claims of the Plaintiffs and the Classes based upon Oracle's significant and ongoing contacts with California.

18. Under California's choice of law principles, which are applicable to this action, the common law of California applies to the common law claims of all Class members. Additionally, given California's significant interest in regulating the conduct of businesses operating within its borders, California's consumer protection laws may be applied to non-resident Plaintiffs and Class members.

V. INTRADISTRICT ASSIGNMENT

19. Pursuant to Civil L.R. 3-2(c), assignment to this division is proper because a substantial part of the conduct which gives rise to Plaintiffs' claims occurred in this district. Defendant's conduct as described below is directed at Internet users and people throughout the United States, including in Alameda County, California.

VI. STATEMENT OF FACTS

20. Oracle is one of the world's largest data brokers, in addition to its prominent public facing business of database related software and data storage services, including "Oracle Cloud" that developers may use to build and run internet sites and mobile applications.¹⁰ Oracle reaps great financial benefit from its conduct described herein; while the revenue attributable to its data broker businesses is not publicly disclosed, Oracle's market capitalization exceeds \$227 billion.

21. As a data broker, Oracle facilitates the buying and selling of digital data, including personal information, among private commercial and governmental entities. Oracle operates a data management platform called the BlueKai Data Management Platform, which includes two key features: the Oracle Data Marketplace and the Oracle ID Graph. The Oracle Data Marketplace

¹⁰ *Oracle Products, Solutions, and Services*, Oracle, <https://www.oracle.com/products/> [https://perma.cc/96FG-AYQC].

1 is one of the world's largest, if not the largest, commercial data exchange, with a broad impact
 2 upon the lives of most Americans and many millions of people worldwide.¹¹

3 22. The Oracle ID Graph is a service product designed to provide “identity resolution,”
 4 the process of “matching individual customer identities . . . and combining them into a single
 5 consistent and accurate customer profile.”¹² Oracle’s ID Graph “synchronizes” the vast amounts
 6 of personal data Oracle has amassed; that is, it matches personal data that can be determined to
 7 share a common origin with other personal data. This synchronizing allows Oracle to identify
 8 individuals and aggregate their many identifiers, which in turn facilitates further synchronizing of
 9 personal data with a high degree of confidence. As Oracle, in velveteen marketing language,
 10 describes it:

11 The Oracle ID Graph helps marketers connect identities across disparate marketing
 12 channels and devices to one customer. Powered by the Oracle Marketing Cloud
 13 and Oracle Data Cloud, the Oracle ID Graph seamlessly pulls together the many
 14 IDs across marketing channels and devices that comprise a given person, enabling
 15 marketers to tie their interactions to an actionable customer profile. This ID
 16 enables the marketer to orchestrate a relevant, personalized experience for each
 17 individual across marketing channels and device types.¹³

18 23. Oracle and other data brokers act as central nodes in the “adtech” network, where
 19 massive volumes of personal information on the world’s population is aggregated and used to
 20 identify and profile individuals for “targeted advertising” or other commercial and political
 21 purposes.

22 24. Oracle tracks the lives of the general public in a manner that is opaque, if not
 23 invisible, to the people it follows, as they have no direct relationship with Oracle. Oracle is
 24 registered as a “data broker” in California (and in other States), which is defined as “a business
 25 that knowingly collects and sells to third parties the personal information of a consumer with
 26 whom the business does not have a direct relationship.” Cal. Civ. Code § 1798.99.80. As such,

[center/IntegratingBlueKaiPlatform/id_management.html](https://perma.cc/LCW9-9PCH) [https://perma.cc/LCW9-9PCH].

1 Oracle does not even maintain a pretense of having directly obtained the consent of the subjects of
 2 its surveillance—i.e., the proposed Classes herein—who have no legal or practical ability to
 3 consent to Oracle’s conduct.

4 25. Oracle’s business model has long roots in the surveillance of ordinary citizens.
 5 Oracle takes its name from a CIA project codename. In 1977, Oracle’s founder, Larry Ellison,
 6 was hired by the CIA to build a database; the CIA was Oracle’s first customer. As of 2020, Oracle
 7 had contracts with all five branches of the military, and recent or pending contracts with the CIA,
 8 as well as substantial relationships with local law enforcement across the country. Surveillance is
 9 central to Oracle’s history and development, and to its current business and marketing plan.

10 **A. Oracle Employs Multiple Methods for the Collection of Personal Data from**
 11 **Unwitting Internet Users.**

12 26. Operation of Oracle’s ID Graph depends upon the accumulation of vast amounts of
 13 personal data concerning as many people as possible. Oracle utilizes multiple means to collect and
 14 aggregate the personal data of people worldwide, including the primary methods alleged in this
 15 subsection.

16 27. Oracle collects many types of personal information from Internet users including
 17 concrete identifiers such as names, home and work addresses, e-mail addresses, and telephone
 18 numbers. Oracle also amasses data about peoples’ behavior, including the sites they visit online,
 19 their digital and offline purchases, where they shop, and how they pay for their purchases. Oracle
 20 gathers this personal information from a suite of its own Internet technologies, including cookies,
 21 tracking pixels, device identification, cross-device tracking, as well as from its acquisition of data
 22 from other parties. Oracle then processes, analyzes, and monetizes this data, as described below.

23 28. Cookies. Oracle deploys its own proprietary “cookies” which are pieces of
 24 software code sent by Oracle that are stored on Internet users’ web browsers and collect
 25 information regarding Internet use. Oracle’s cookies are frequently labeled “BlueKai,” named
 26 after a start-up Oracle acquired in February 2014. Oracle’s BlueKai cookies track online and
 27 mobile app activity, obtaining data in real time and transmitting it back to Oracle’s servers. When
 28 an Internet user visits a webpage or uses a mobile application, Oracle employs its BlueKai cookies

1 to gather and transmit to itself information including the unique user ID, IP address, session time,
 2 number of sessions or visits, and the URL or websites an Internet user has visited (*e.g.*, Referrer
 3 and Origin headers), hyperlinks clicked, and documents downloaded.¹⁴ Oracle is able, with the
 4 use of algorithmic data processing, to use the data it gathers from BlueKai cookies (and, as
 5 explained below, which may also be associated with additional data from other sources) to infer a
 6 wide range of behavioral traits and information that it attributes to individual Internet users
 7 through persistent identifiers or other personal information of the Internet users—from their
 8 consumer preferences, income levels, and their politics.

9 29. JavaScript. Oracle utilizes a proprietary software device, referred to as “bk-
 10 coretag.js” JavaScript code, to “extract,” or intercept, “user attributes,” which include the contents
 11 of users’ communications with websites, and secretly sends them to Oracle while the users are in
 12 the process of communicating with those websites. Oracle’s technical documentation explains that
 13 bk-coretag.js JavaScript code deployed by Oracle collects “user attributes” “such as product views,
 14 purchase intent, [and] add-to-cart actions”¹⁵ and other communications that users have with
 15 websites and simultaneously copies and sends those communications to Oracle.

16 30. Oracle places the bk-coretag.js JavaScript code on Internet users’ electronic devices
 17 when they browse a website that contains certain Oracle code. When an individual Internet user
 18 visits a web page, his or her browser sends a message called a “GET request” to the webpage’s
 19 server. The GET request tells the website what information is being requested and also instructs
 20 the website’s server to send the information back to the user. The bk-coretag.js JavaScript code
 21 then communicates with Oracle’s servers and source code by sending separate “GET” requests to
 22 Oracle that contain copies of contents in the initial “GET” request being sent by the user’s browser
 23 to the website they are visiting.

24

 26 ¹⁴ Martin Degeling & Jan Nierhoff, *Tracking and Tricking a Profiler Automated Measuring and*
 27 *Influencing of Bluekai’s Interest Profiling*, Workshop on Privacy in the Electronic Society (Oct.
 15, 2018), <https://dl.acm.org/doi/pdf/10.1145/3267323.3268955> [https://perma.cc/7UVK-ALU9].

28 ¹⁵ *Oracle Data Cloud Core Tag Implementation*, Oracle, [https://docs.oracle.com/en/cloud/saas/data-
 cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/DataIngest/coretag_implementation.html](https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/DataIngest/coretag_implementation.html)
 [https://perma.cc/8XVU-8Z2F].

31. Oracle uses the bk-coretag.js JavaScript code to intercept the contents of Internet users' communications with web sites as follows:

- a. When a user opens an Internet web page that contains certain code, a request is sent by the user's browser to Oracle's servers to fetch the bk-coretag.js JavaScript file.
- b. The bkcoretag.js code then triggers a series of additional network "GET" requests.
- c. As part of these "GET" requests, the bk-coretag.js code intercepts the contents of the user's communications with the browser and simultaneously copies those contents and sends them to Oracle.

32. Through this practice, Oracle is able to intercept substantive communications between internet users and websites, including, inter alia: ¹⁶

- a. the URLs being browsed by the Internet user as well as the referrer URL;
- b. webpage title;
- c. webpage keywords;
- d. the exact date and time of the website visit;
- e. the IP address of the user's computer;
- f. product page visits;
- g. "purchase intent"¹⁷ signals;
- h. "add-to-cart actions"; and
- i. data entered by the user into forms on the website.

33. The bk-coretag.js code also sends to Oracle the Internet user's login status and "hashes" of the user's email address and phone number.¹⁸ Oracle attributes the communications to

¹⁶ *Data Ingest*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/data_ingest.html [https://perma.cc/99JS-5Z64].

¹⁷ Oracle's technical documentation does not appear to define the term "purchase intent," however an Oracle document describes "Interest and intent signals" as including "search, page views, and price comparison." See *Activation Playbook*, Oracle (2020), <https://www.oracle.com/za/a/ocom/docs/cx-activation-vertical-playbook-2020.pdf> [https://perma.cc/TYS5-NKX4].

¹⁸ According to Oracle, "Hashing is a form of encryption used for swapping data between integrated data management systems." See *Hashing Identifier*, Oracle,

specific individuals using identifiers, such as email address, phone number, or account ID, and then uses this data to enrich its user profiles and ID Graph and classify users into categories for targeting.¹⁹

34. Oracle's technical documentation also explains that bk-coretag.js engages in "synchronous" communication interception, i.e., interception while the communication is in transit, which "[s]ends data to the Oracle Data Cloud platform as quickly as possible . . . while the web browser loads."

35. Oracle's bk-coretag.js JavaScript code has been recognized by security researchers as a tracking mechanism for surreptitiously monitoring and intercepting user's internet communications and activity. It has been described as "click interception script" that intercepts clicks by users on webpages,²⁰ and as an online activity "tracker" that can "learn a sizable chunk of the browsing history of a given user, and likely without their knowledge."²¹

36. Tracking Pixels. Another tool utilized in Oracle's digital tracking efforts are "tracking pixels." Tracking pixels are pieces of code that are embedded into webpages and mobile applications built with Oracle's technology, such as Oracle Cloud. Oracle tracking pixels are essentially invisible to Internet users because they are hidden within the code of a webpage and activate (or "fire") whenever the page is opened, regardless of and prior to any pretense of consent being sought. Unlike cookies, tracking pixels cannot be disabled. When a user visits a site with an Oracle pixel, the company receives, at minimum, the full URL, time zone, screen resolution, browser window resolution, and title of the webpage.²² Consequently, if a person visits, for

²¹ See Zhonhao Yu, Sam Macbeth, et al., *Tracking the Trackers*, World Wide Web Conference (April 11-15, 2016), <http://josepmpujol.net/public/papers/pujolTrackingTheTrackers.pdf> [https://perma.cc/WT3W-TW5U].

²² *Device Fingerprints and Custom Sign In Pages*, Oracle,

example, a specific product page on a retailer’s website, Oracle instantly knows about it and, as with cookies, adds the information to the person’s profile in Oracle’s database. Nor are pixels confined to websites: Oracle pixels are in marketing emails from numerous companies—when the email is opened, the pixels identify the specific reader and the underlying marketing campaign.²³

37. This data collection is not dependent upon any relationship that an Internet user may or may not have with Oracle, in fact, Oracle primarily collects data through its BlueKai cookies and pixels from persons having no privity whatsoever with Oracle. Even privacy-conscious users who endeavor to understand the origins of Oracle cookies may not know Oracle is amassing data about them because Oracle’s cookies and pixels do not bear the company’s name.

38. Oracle’s cookies and tracking pixels are pervasive throughout the Internet.²⁴ Oracle has agreements with numerous high-traffic websites like the New York Times, ESPN, and Amazon to place cookies and/or pixels on their websites.²⁵ By blanketing popular websites with these tracking tools, Oracle reaches a substantial percentage of Internet users—Oracle cookies are found on over 20 percent of the top 10,000 websites²⁶ and more than 48 thousand websites.²⁷

39. Device Identification. Oracle tracks users by harvesting and exfiltrating user “device identifiers.” Oracle is able to track Class members’ online activities by collecting identifiers tied to their devices. These identifiers include IMEI (International Mobile Equipment

<https://docs.oracle.com/en/cloud/paas/identity-cloud/uaid/use-device-fingerprints.html#GUID-17B61B5F-7937-4830-8368-075EE2001BDF> [https://perma.cc/56VS-XQFU].

1 Identity), MAC address (Media Access Control address), and Mobile Advertising ID (MAID) such
 2 as Advertising Identifier (IDFA) on iOS and Advertising ID (ADID) on Android devices.²⁸

3 40. Cross-device Tracking. Oracle monitors Class members' activities across their
 4 devices through cross-device tracking. When Class members shop online at home on their iPad,
 5 read the news on their iPhone during their commute, and visit sites on their laptop at work, Oracle
 6 monitors and collects their movements.²⁹ Oracle also tracks activity through television and touts
 7 its ability to monitor viewing habits and measure the effectiveness of advertising in video games.³⁰
 8 Oracle thereby allows its customers to target Plaintiffs and Class members *across their devices*

41. AddThis. AddThis is a widget, or a piece of code that web developers incorporate into a website that provides a graphical user interface that displays information and provides a means for a user to interact with the website, which Oracle acquired in 2016. With an AddThis enabled website, Internet users can bookmark or post the webpage to their various social media platforms including Facebook, Pinterest, and Twitter. These plugins, which are free, are ubiquitous: AddThis is currently used on 15 million websites and purports to offer “insight into the interests and behaviors of over 1.9 billion web visitors,” and its “vast global footprint reaches 96% of the U.S. web.”³² Whenever an Internet user visits a website with an AddThis plugin, the user is subjected to cookies and pixels, without any notice or practical ability for detection, and as a result, Internet users are unaware that Oracle is tracking and recording their online activity for purposes of identify the Internet users and their activities to Oracle and its customers. Recent forensic analysis has confirmed that AddThis is ubiquitous and tracks data from sites related to sensitive health and personal safety information: AddThis trackers were found on more than 4,000

³² *About Us*, AddThis (2022), <https://www.addthis.com/about/> [https://perma.cc/JK9N-3W3Z].

popular websites, as well as four states' coronavirus information pages.³³ AddThis trackers were also found on websites with resources for undocumented immigrants, domestic violence survivors, and the LGBTQ community.³⁴ Human Rights Watch, concerned about Oracle's collection of data from children, has noted that:

. . . AddThis does much more than encourage social media traffic. Whether or not a person clicks on the "share" button, AddThis instantly loads dozens of cookies and tracking pixels on website visitors' browsers, like nesting dolls, each collecting and sending user data to Oracle and to dozens of other AdTech companies to profile and target a person or a child with behavioral advertising that follows them across the internet.³⁵

42. Datalogix. In 2014, Oracle acquired Datalogix, an information broker specializing in profiling people based on their purchases at brick and mortar retailers, primarily by purchasing and aggregating data from retailers' loyalty programs. In 2019, an Oracle executive explained the colossal scale of this data as including, "115 million U.S. households, 10 billion SKU-level transactions, over 1,500 leading brands, and \$5 trillion in consumer spending data."³⁶ Datalogix's coverage was found by academic researchers to be up to 76.2% in the U.S. and 43.6% in the U.K.³⁷ Datalogix data is now referred to as "Oracle Datalogix (DLX) data" and is described by Oracle as "the premier solution when looking for offline purchase- and activity-based audiences."³⁸ Among Oracle's current product offerings is the "Datalogix Profile Analysis" which

1 provides advertisers with “Demographic Segments,” “Lifestyle Segments, Retail Behavioral
2 Segments, and Purchase Behavioral Segments” on Internet users.³⁹

3 43. Data From Third Parties. Oracle enhances the personal information that it collects
4 from Internet users with personal information collected and sold by other third party data brokers.
5 The personal information Oracle amasses through its tracking technologies together with the
6 personal information collected by third parties includes billions of data points on more than 300
7 million users, or over 80% of the entire U.S. population.⁴⁰

8 44. When an Internet user uses a website employing any of the Oracle tracking
9 technologies described above, Oracle can track and store behavioral activity and personal
10 information, including, but not limited to, home location, age, income, education, family status,
11 hobbies, weight, and what the user bought at a brick and mortar business yesterday afternoon.
12 Internet users are not made aware of, and therefore cannot consent to, use of their information to
13 facilitate Oracle’s personal identification enterprise, the “Oracle ID Graph.”

14 **B. Oracle Uses The Personal Data of Internet Users To Fuel Its Personal**
15 **Identification and Profiling Product “Oracle ID Graph”.**

16 45. Oracle has developed the “Oracle ID Graph” using the vast stores of personal data
17 it has accumulated. Oracle designed the Oracle ID Graph to have the capability of identifying
18 Internet users and compiling personal data associated with them, including so-called “anonymous”
19 data which Oracle re-identifies to specific individuals. Oracle makes the Oracle ID Graph
20 available for sale to private and governmental purchasers on its Data Marketplace.

21 46. In April 2015, Oracle unveiled Oracle ID Graph as a new feature of the BlueKai
22 data management platform.⁴¹ The introduction of Oracle ID Graph permitted the compiling of an

Internet user's various disaggregated identifiers. Previously, because browsers, devices, and mobile applications each use a different identifier, identification of users was typically limited to a single device. The Oracle ID Graph processes available personal data, digital identifiers (such as "browser cookies, mobile advertising IDs, IP addresses, and console IDs"), and concrete identifiers (such as "hashed first names, last names, postal addresses, email addresses, and telephone numbers") to identify and establish "a single, universal view of identity" for each user.⁴² In addition to connecting and associating multiple browser and device identifiers, the Oracle ID Graph combines these identifiers with demographic and behavioral and biographic data, ranging from marital status to hair type to college major to household location, to enhance the profiles of individuals within its ID Graph.⁴³

47. Oracle has described its ID Graph as the "backbone technology [that] powers all Oracle Data Cloud solutions," allowing Oracle's customers to track individual people "seamlessly across devices (desktop and mobile) and channels (offline and online) via more than 200 media and marketing platforms, including the largest and fastest-growing consumer platforms."⁴⁴

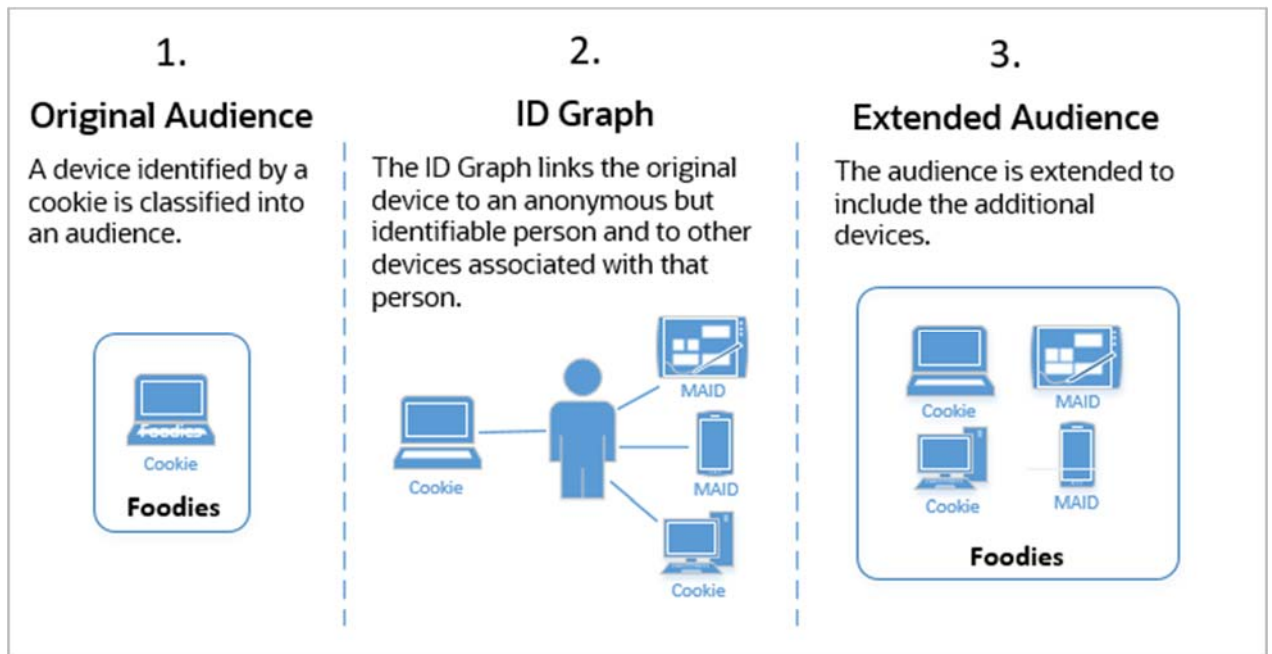

48. The Oracle ID Graph is an example of the practice known in the adtech industry as "identity resolution." As Oracle explains, the Oracle ID Graph lets its customers "connect identities across disparate marketing channels and devices to one customer" by "seamlessly pull[ing] together the many IDs across marketing channels and devices that comprise a given

⁴² *12 Must-Ask Questions to Separate Fact From Fiction*, Oracle (2018), <https://www.oracle.com/a/ocom/docs/idg-12-must-ask-questions-for-identity-vendors.pdf> [https://perma.cc/WW3A-HVBA].

⁴³ *Activation Playbook*, Oracle (2020), <https://www.oracle.com/ca-fr/a/ocom/docs/cx-activation-vertical-playbook-2020.pdf> [https://perma.cc/TYS5-NKX4].

Oracle further describes the ID Graph as follows: "The Oracle ID Graph is not a product but it is a foundational capability or technology that power[s] the Oracle [Bluekai Data Management Platform]. All linkages in Oracle ID Graph are continuously validated and scored, which changes dynamically based on a proprietary algorithm to the input . . . Oracle ingests massive amounts of IDs across cookies, login, HH, email, and mobile ad IDs on a weekly or sometimes daily basis from ID data partners." See *Unite Disparate Data to Make It Actionable*, Oracle, <https://web.archive.org/web/20210119032758/https://www.oracle.com/data-cloud/products/data-management-platform/id-graph.html> [https://perma.cc/Y5A5-MXL3].

person, enabling marketers to tie their interactions to an actionable customer profile.”⁴⁵ The following illustration from Oracle describes this process:⁴⁶

49. Oracle’s identity resolution process consists generally of three steps:

a. **First**, Oracle filters the data it collects, from BlueKai cookies, pixels and other sources, into millions of individual profiles on Class members. Data from, *inter alia*, “\$90B in transactions tied to real people every week,” “digital ID graphing on 115MM+ households,” and “a global network of 15MM websites” is validated, compared, and combined into “a single, universal view of identity.” The ensuing profiles are exceedingly detailed. They include digital identifiers like “browser cookies, mobile advertising IDs, IP addresses, and console IDs,” and hard data such as “hashed first names, last names, postal addresses, email addresses, and telephone numbers.”⁴⁷ This is in addition to the details that Oracle layers onto these core identifiers, including offline and geolocation data. As Oracle describes it, the “promise” of the ID

⁴⁵ *ID Management*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/id_management.html [https://perma.cc/LCW9-9PCH].

⁴⁶ *Creating Audiences*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/Platform/Audiences/create_audience.html [https://perma.cc/K6F2-NPZF] (the reference to “MAID” refers to a “mobile advertising ID”).

⁴⁷ *12 Must-Ask Questions to Separate Fact From Fiction*, Oracle (2018), <https://www.oracle.com/a/ocom/docs/idg-12-must-ask-questions-for-identity-vendors.pdf> [https://perma.cc/WW3A-HVBA].

Graph “is to connect identifiers to the consumer online and offline. Offline data ties the identity graph to *real people living at a real address*, not just a mixture of device IDs and cookies. Identity graphs built from offline *and* online signals are better connected and validated” (emphasis added).⁴⁸

b. **Second**, Oracle applies analytics to extract yet more information from the profiles it has created. An Oracle profile has hundreds or thousands of data points; Oracle then infers from this raw data that, for example, a person isn’t sleeping well, or is experiencing headaches or sore throats, or is looking to lose weight, and thousands of other invasive and highly personalized inferences.⁴⁹

c. This process provides Oracle with a virtual panopticon: Oracle purports to have vision on virtually everything ascertainable in electronic form about Class members, from where they live, to the media they consume, to the things they buy, to the views they hold.⁵⁰ The following examples illustrate the extraordinary breadth of the data that Oracle’s customers can access via Oracle ID Graph:

Address: Oracle has an address for over 110 million households, and lets clients target households within a radius of a given location.⁵¹

Life Events: Oracle can target based on major life events, including marriage, childbirth, job changes, and graduation.⁵²

Education: Oracle segments by degree obtained, type of school (*e.g.* public, private, community college, online), and even major.⁵³

Purchase History: Oracle can filter for specific purchases—made both in brick-and-mortar establishments and online—such as “Alcohol Beverage purchase based modeled audiences,” including micro-targeting categories tracking people’s alcohol use habits, such as “Malt Beverage Buyers” or “Wine or Liquor Store Top Spenders.”⁵⁴

⁴⁸ *Id.*

⁴⁹ *Oracle Data Cloud Health and Wellness Segments (US only)*, Oracle (Last Updated Oct. 14, 2020), <https://www.oracle.com/a/ocom/docs/corporate/health-and-wellness-segments.pdf> [https://perma.cc/37T2-FG4Q].

⁵⁰ *Activation Playbook*, Oracle (2020), <https://www.oracle.com/za/a/ocom/docs/cx-activation-vertical-playbook-2020.pdf> [https://perma.cc/TYS5-NKX4].

⁵¹ *Id.*

⁵² *Id.*

⁵³ *The Audience Playbook*, Oracle, at 11 (Aug. 2016), <http://online.pubhtml5.com/mdhz/hgpp/#p=11> [https://perma.cc/L6WS-ND8L].

⁵⁴ *Alcohol and Beverage Digital Audiences and Contextual Segments*, Oracle,

1 *Health & Wellness*: Oracle segments people based on intimate information,
 2 including a person's views on their weight, hair type, sleep habits, and type of
 3 insurance.⁵⁵ Other categories appear to be proxies for medical information that
 4 Oracle purports not to share, like "Emergency Medicine," "Imaging & Radiology,"
 5 "Nuclear Medicine," "Respiratory Therapy," "Aging & Geriatrics" "Pain Relief,"
 6 and "Allergy & Immunology."⁵⁶

7 d. **Third**, Oracle matches the data provided by its customers to the existing
 8 profiles of individuals it has developed. Using "Oracle OnRamp," the company "ingests
 9 [customers'] PII [personally identifiable information] and matches it to 115MM U.S. households,
 10 first names, last names, and telephone numbers."⁵⁷ Oracle clients can then target (or exclude)
 11 Class members based on attributes in Oracle profiles, and purchase yet more customer
 12 information from the Oracle Data Marketplace.

13 e. The matching process also helps Oracle's clients to knit together aspects of
 14 their own data sources. For instance, tying previously siloed online and offline information to an
 15 Oracle profile might reveal the user who last week visited a business's website is the same person
 16 who yesterday made purchases at a particular brick-and-mortar store belonging to that same
 17 business.⁵⁸ The image below illustrates the process.⁵⁹

⁵⁹ *Offline Match Integration*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/DataIngest/offline_match.html [https://perma.cc/2QXQ-TNY4]. Oracle offers clients other ways to ingest customer data, but regardless of means the result—uploading customer data to the Oracle Data Cloud—is the same. The other options are summarized at *Data Ingest*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/data_ingest.html [https://perma.cc/S2FZ-EYLD].

50. Oracle ID graph relies on “ID swapping” to “synchronize” or match unique user IDs (UUIDs) of Class members between Oracle Data Cloud Platform and its clients. Oracle ID graph employs a variety of deterministic and probabilistic matching techniques to this end.⁶⁰ The combination of deterministic and probabilistic techniques to construct the Oracle ID graph is one of its distinguishing features.⁶¹ This process includes the following technical features:

⁶⁰ *Deterministic and Probabilistic Data Matching*, Oracle (2010), https://docs.oracle.com/cd/E19182-01/821-0919/ref_sme-deter-probl_c/index.html [https://perma.cc/NCL3-QYHD].

⁶¹ Audrey Rusch, *When it Comes to Identity, Probabilistic or Deterministic is Not the Question*, Oracle, (Aug. 19, 2019), <https://blogs.oracle.com/advertising/post/when-it-comes-to-identity-probabilistic-or-deterministic-is-not-the-question> [https://perma.cc/5EQE-REXV].

1 a. Oracle employs a “tag” to exfiltrate Class members’ personally identifiable
 2 information such as email addresses, phone numbers, physical addresses, account numbers,
 3 Twitter handles, and other information to Oracle for a deterministic match.⁶² Even if the
 4 personally identifiable information is hashed before being exfiltrated to Oracle, it can be easily
 5 reversed and thus does not provide any privacy as compared to no hashing.⁶³

6 b. Oracle employs “cookie sync” technology⁶⁴ to link cookie-based identifiers
 7 of Class members between Oracle Data Cloud Platform and its clients for a deterministic match.⁶⁵
 8 Cookie syncing is used by Oracle to circumvent the security feature of web browsers called
 9 “Same Origin Policy” that aims to prevent data sharing between different parties.⁶⁶ Cookie
 10 syncing also helps Oracle circumvent privacy features in web browsers, such as Safari, that block
 11 third-party cookies.⁶⁷

12 c. For Class members using mobile apps where cookies may not be present,
 13 Oracle uses Mobile advertising IDs (MAIDs) that are derived from mobile apps (e.g., Identifier
 14 for Advertisers [IDFA] on iOS⁶⁸ and Google Advertising ID (AAID) on Android⁶⁹) for a

13 52. A 2019 investigation into Oracle's profiling activities⁷³ resulted in the following
 14 analysis demonstrating the all-encompassing nature of the online and offline data Oracle collects
 15 and associates with IDs, which are tied to individual Class members, including information related
 16 to credit card purchases from Visa and MasterCard, brick and mortar establishments, and credit
 17 reporting agencies:

https://crackedlabs.org/dl/CrackedLabs_Christl_CorporateSurveillance.pdf
 [https://perma.cc/T7Z6-JPZK].

53. In 2016, approximately one year after launch, Oracle Chairman and Chief Technological Officer Larry Ellison boasted there were five billion people in Oracle's ID Graph.⁷⁴

54. According to Ellison, the purpose of Oracle ID Graph is to predict and influence the future behavior of billions of people. He explained Oracle could achieve this goal by looking at social activity and locations in real time, including "micro location[s]." For example, Ellison has represented that companies will be able to know how much time someone spends in a specific aisle of a specific store and what is in the aisle of the store. "By collecting this data and marrying it to things like micro location information, Internet users' search histories, websites visits and product comparisons along with their demographic data, and past purchase data, Oracle will be able to predict purchase intent better than anyone."⁷⁵

55. Ellison likened the breadth and detail of Oracle's data collection to Facebook's—even arguing Oracle is better at mass surveillance and profiling than Facebook:

Now where does this demographic data come from? Where does this past purchasing stuff come from? Well Oracle Data Cloud is the world's largest data

⁷⁴ Andrew Birmingham, *Oracle Has Five Billion Consumers In Its Identity Graph: Ellison*, LinkedIn (Sept. 19, 2016) <https://www.linkedin.com/pulse/oracle-has-five-billion-consumers-its-identity-graph-birmingham> [https://perma.cc/MZ57-C4UN].

⁷⁵ *Id.*

base. There are two big databases to keep track of consumers and which have a lot of information about consumers. One is very famous, it's called Facebook. The other one is less well known, it's Oracle's Data Cloud . . . They have great data, don't get me wrong. Facebook has incredible data assets, but so do we. In our data cloud marketers are able to target consumers and do a much better job at predicting what they're going to buy next.⁷⁶

56. Ellison's vision for mass surveillance and profiling is totalizing and extends to the entire world: "How many people are on earth? Seven billion, two billion to go."⁷⁷

C. Oracle Uses the Data Marketplace to Enrich the Dossiers It Compiles on Class Members.

57. Oracle, its partners, and its customers work in parallel to compile personal data and associate that data with specific individuals, effectively creating "dossiers" on people across the world. Oracle accomplishes its dossier building through its multifarious business practices, including not only the functionality of the ID Graph that connects, unifies, and then associates data to a person into a "profile," but also the functioning of the Oracle Data Marketplace. Oracle's Data Marketplace is an online store owned and operated by Oracle where Oracle facilitates the buying and selling of data and data-derived services by Oracle and its so-called "premier partners" to private commercial and governmental entities. The Data Marketplace allows the confluence of mass amounts of personal data by which its participants, including Oracle, can continually track people's activities and enrich people's dossiers.

58. The Data Marketplace trades in (1) personal data that Oracle collects itself such as that collected via BlueKai tracking pixels (first-party data); (2) personal data that private companies collect from their own users and sell directly to Oracle clients (second-party data); and (3) personal data that other third-party data brokers collect and sell to Oracle clients on the Data Marketplace (third-party data).

1. Oracle Audiences.

59. Oracle Audiences are derived from the raw personal information that Oracle itself collects from Internet users via the cookies, tracking pixels, cross-device tracking, AddThis, and

⁷⁶ *Id.*

⁷⁷ *Id.*

1 Datalogix technologies described above.⁷⁸ Oracle takes this personal information and applies
 2 algorithmic processing to develop inferences about specific people. Oracle uses the inferences it
 3 has made to assign people to certain “audiences” or segments.

4 60. For example, for Mother’s Day, Oracle’s marketing materials explained that
 5 Oracle’s proprietary audience segments could help marketers target the following groups: (1)
 6 “Millennials spoil moms,” 24-35 year olds who Oracle predicted were going to purchase higher
 7 priced gifts such as jewelry or electronics, (2) “Breakfast at Tiffany’s,” or people who were “more
 8 likely to spring for earrings over roses,” and (3) “Mama’s boys,” 18-24 year old men who we
 9 likely going to buy an expensive gift for their mother.⁷⁹ Oracle touts that Oracle Audiences are
 10 effective because “the best predictor of future behavior is past behavior.”

11 61. Oracle’s Health and Wellness segments reveal sensitive, health-related types of
 12 personal information Oracle collects on Class members. By way of example only, these segments
 13 include individuals struggling with insomnia (“Sleeping aids”), acne (“Acne Treatments”), weight
 14 issues (“Diet Programs,” “Weight Loss Programs,” and “Adult Nutrition & Weight Control”), and
 15 nicotine addiction (“Smoking cessation”).⁸⁰

16 **2. Second-party data.**

17 62. Oracle also facilitates the sale and purchase of second-party data, i.e., personal
 18 information collected from Internet users by one company and sold directly to another company.
 19 Data buyers can browse the second-party data listings on the Data Marketplace and contact data
 20 sellers.⁸¹ These direct deals occur in a closed, private market operated by Oracle: “The data seller,
 21

 [https://perma.cc/9FWJ-AUJM].

⁸¹ *Using the Second-party Data Discovery Marketplace*, Oracle,
[https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-
 center/Platform/ManagingTaxonomy/second-party_data_marketplace.html](https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/Platform/ManagingTaxonomy/second-party_data_marketplace.html)
 [https://perma.cc/464C-R426].

1 buyer, and Oracle can then work together to make a deal.”⁸² After purchase, buyers can enhance
 2 the ID Graph by uniting the second-party data with other personal information in the ID Graph,
 3 thereby painting a more specific and detailed picture of Internet users.

4 **3. Other Data Brokers (Third-party data).**

5 63. Oracle operates the world’s largest third-party data marketplace.⁸³ Third-party data
 6 is information collected by companies that do not have a direct relationship with Internet users.
 7 Data brokers participating in Oracle’s Data Marketplace freely portray themselves as able to defeat
 8 users’ anti-tracking precautions, a pitch at odds with Oracle’s privacy policies and its professed
 9 respect for the right of individuals to opt out. For instance, ALC Real World Data, a “branded
 10 data provider[] available through the BlueKai Marketplace” that offers “political” data, claims to
 11 provide “a deeper understanding of the people you’re targeting” because it “has no cookies to
 12 erase and can’t be ‘cleared.’”⁸⁴

13 64. Oracle partners with over 65 major brokers of third-party data and refers to these
 14 companies as “Branded Data Providers.”⁸⁵ The personal information sold by Branded Data
 15 Providers on the Oracle Data Marketplace can be used to enhance the digital dossiers in the Oracle
 16 ID Graph.⁸⁶ A number of Oracle’s Branded Data Providers sell highly intrusive and offensive
 17 personal information without consent:

18 a. Mobilewalla: Boasts of having “billions of data points daily” from 276
 19 million unique mobile devices in the U.S. alone⁸⁷, and 1.5 billion mobile devices in 31 countries

worldwide.⁸⁸ In particular, Mobilewalla sells age, gender, GPS, and location data. Mobilewalla specifically advertises the personal location information it sells as a way to increase political campaign results.⁸⁹ During the summer of 2020, Mobilewalla tracked mobile devices to collect data on 17,000 Black Lives Matter protesters including their home addresses and demographics. Mobilewalla also released a report entitled “George Floyd Protester Demographics: Insights Across 4 Major US Cities,” which prompted a letter and investigation by Senator Elizabeth Warren and other congress members.⁹⁰ In response to this investigation, Mobilewalla revealed that it had provided location data used by the Department of Homeland Security, the Internal Revenue Service, and the U.S. military for warrantless tracking of devices both at home and abroad.⁹¹

b. 140 Proof: Collects data from 700-plus million social media users across various social networks. The data includes content as well as meta-data such as “follows, check-ins, re-blogs, pins, likes, or share.” It claims to be able to build and target audiences for “hard to find users” and “social influencers.”⁹²

c. Affinity Answers: Advertises data on Class members’ interests in political organizations (e.g., NAACP, National LGBTQ Task Force, Planned Parenthood), political media figures (e.g., Bill O’Reilly, Glenn Beck, Anderson Cooper, Arianna Huffington), state-level

1 Democratic Party and Republican Party organizations, and specific politicians in office.⁹³ It
 2 harvests information about hundreds of millions of users from major social networks such as
 3 Facebook, Instagram, and Twitter.

4 d. Gravy Analytics: Advertises location intelligence at “millions of places,
 5 points-of-interest and local events” to power “precision-targeted mobile advertising campaigns.”
 6 Its “Brand Audiences” include 2000-plus U.S. chain locations such as BestBuy, Burger King,
 7 Starbucks, and Target.⁹⁴ It also sells phone location data to government agencies.⁹⁵ Indeed, the
 8 FBI contracts with Gravy Analytics’ subsidiary, Venntel, for the monitoring of social media posts
 9 and location data. In 2020, the House Committee on Oversight and Reform opened an
 10 investigation into Venntel for its business of buying location data from various smartphone apps
 11 and selling that data to agencies including the FBI, Department of Homeland Security, DEA, ICE,
 12 CBP, and the IRS. The Trump Administration also used Gravy Analytics’ location data to track
 13 people crossing the US-Mexico border.

14 e. Acxiom: This massive data broker openly and explicitly advertises that it
 15 has data on 45.5 million current and former U.S. military personnel.⁹⁶

65. Oracle provides, and profits from, this data marketplace that allows third-party data brokers to traffic in Class members' highly sensitive personal information. The following examples non-exhaustively illustrate the types of sensitive information Oracle facilitates the sale of in its marketplace:

a. *Race*: At least five data brokers expressly provide racial categories as "audience segments." These include "African American," "Asian," "Hispanic," "Caucasian," and "American Indian."⁹⁷ Multiple data brokers' (e.g., Retargetly, DataXpand) business model consists entirely of targeting Hispanic audiences.⁹⁸

b. *Location*: Data brokers offer location tracking, including a "real-time GPS signal." Mobilewalla, for instance, described above, has advertised to Oracle customers that its data can be used to serve a person an ad "at a specific time (say between 8-8:30PM), at a specific location/place (say at the AT&T Stadium in Dallas) during a specific event (say, a country music concert by Shania Twain)."⁹⁹ Cuebiq advertises "precise location data" from 61+ million U.S. smartphone users on over 180 mobile apps.¹⁰⁰ TrueData advertisers "real-time GPS and beacon location signals" on 245 million U.S. mobile users.¹⁰¹

c. *Politics*: Data brokers participating in Oracle's Data Marketplace purport to offer segments based on detailed political information, and some are avowedly partisan in doing so. i360, for example, bills itself as "the leading data and technology resource for the pro-free-market political and advocacy community" with a database of "199 million voters from all 50

states.”¹⁰² It boasts a dataset that includes “extensive political identification, coalition and membership information collected by way of in-person, phone and online surveys, as well as through partner relationships in addition to lifestyle and consumer data collected from multiple top-tier providers.”¹⁰³ It advertises registration and partisanship segments such as “Catholic,” “Pro 2nd Amendment,” “Pro Choice,” “Pro Life,” “Pro Marriage Same Sex,” “Pro Traditional Marriage,” “Democratic Voters,” “Independent Voters,” “Republican Voters,” “Swing Dem Voters,” and “Swing GOP Voters.”¹⁰⁴

d. *Medical*: OnAudience, a “data provider” that profiles Internet users by “observing user activity based on websites visited, content consumed and history paths to find clear behavior patterns and proper level of intent,”¹⁰⁵ lets customers target individuals categorized as interested in “Brain Tumor,” “AIDS & HIV,” “Substance Abuse” and “Incest & Abuse Support.”¹⁰⁶

66. Oracle monetizes Class members’ personal information in part by providing a process through which Oracle clients can winnow Oracle’s vast store of detailed user data into fine-grained audiences. For instance, an Oracle client could choose to filter billions of people down to a handful of Class members who fit a cross-section of micro-targeted segments. Oracle also allows clients to create audiences that exclude based on any or all of the same criteria.

¹⁰² *comScore and i360 Team Up to Provide Digital Marketing Insights for Political Campaigns and Advocacy Groups*, Cision PR Newsire (Apr. 17, 2012), <https://www.prnewswire.com/news-releases/comscore-and-i360-team-up-to-provide-digital-marketing-insights-for-political-campaigns-and-advocacy-groups-147750205.html> [https://perma.cc/4F88-VHPT]; *The Database, Individual-Centric Data Warehouse*, i-360, <https://www.i-360.com/the-database/> [https://perma.cc/8TY2-C9HH].

67. Based on Oracle's public-facing documentation, Oracle provides detailed "control panels" to its clients which allows the clients to analyze, segment, and target Plaintiffs and Class members based on the digital dossiers Oracle has compiled on them¹⁰⁷:

68. In other words, Oracle facilitates the creation of proxies for protected classes like race, and allows its clients to exclude on that basis. For example, one Oracle customer website describes how, after Facebook made it more difficult to target ads based on race in the employment and credit areas, Oracle helped it achieve the same result.¹⁰⁸

69. Oracle clients include not only businesses looking to advertise their wares, but also political campaigns and government agencies seeking to surveil, investigate, or target particular individuals with propaganda. Oracle markets directly to these public agencies and political parties, and refers to them as "Public Sector Customers."

¹⁰⁷ *Creating Audiences*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/Platform/Audiences/create_audience.html [https://perma.cc/K6F2-NPZF].

70. Political campaigns now have “needle-in-the-haystack capabilities” to “microtarget voters on all their devices” using personal information sold by data brokers.¹⁰⁹ The Trump campaign, for example, built a 220 million–person database of voter information named “Project Alamo” using Datalogix, a data collection platform owned by Oracle.¹¹⁰ Project Alamo, powered by Oracle data, facilitated the Trump campaign’s voter suppression initiatives including highly targeted political advertising to African Americans, white women, and young white liberals¹¹¹ in 16 swing states, several of which were narrowly won by Trump. In Michigan, a state that Trump won by only 10,000 votes, 15% of voters are black, but they represented 33% of Project Alamo’s “special deterrence” category.¹¹² These voters received anti-Clinton Facebook ads that included audio of Hilary Clinton referring to African-American children as “superpredators.”¹¹³ Through Project Alamo’s voter suppression efforts, it is estimated that 2 million black voters who voted in 2012 did not vote in 2016.¹¹⁴

71. Oracle also powers “Facebook Custom Audiences” which allows advertisers, including political parties and campaigns around the world, to push ads to Facebook using personal data unlawfully collected and sold by Oracle.¹¹⁵ Oracle also recently announced a

¹¹⁵ *Find Buyers at Scale on Facebook With Oracle Data*, Oracle, <https://www.oracle.com/a/ocom/docs/six-steps-activating-odc-audiences-on-facebook.pdf>

1 partnership with Amazon: Oracle Audiences is now integrated into the Amazon platform allowing
 2 Oracle's clients to target Amazon users.¹¹⁶

3 72. The general public does not have access to the Data Marketplace, or any visibility
 4 into who is buying and selling their information. Access is restricted to buyers and sellers, so
 5 individuals whose data is being bought and sold have no reasonable insight into what occurs there
 6 or the extent of Oracle's violations of their privacy rights. Publicly available information indicates
 7 that data sold on the Data Marketplace is highly sensitive, and is collected in pernicious and illegal
 8 ways.

9 73. Oracle does not publicly disclose the identity of its clients that participate on the
 10 Data Marketplace. Plaintiffs and Class members have no reasonable basis to discern the identity
 11 of the persons and/or entities that buy or sell information about them on the Data Marketplace.¹¹⁷
 12 This opacity extends to possible state actors. Oracle has a well-documented history of marketing
 13 its technology to state actors within the United States and abroad.¹¹⁸ While Oracle *does* have a
 14 total embargo on data sales to a small group of countries including Iran, North Korea, and Syria,¹¹⁹
 15 it has marketed its surveillance products to governments, police or paramilitary forces, including

China,¹²⁰ Brazil, Mexico, Pakistan, and the United Arab Emirates.¹²¹

D. Data Brokers Are a Recognized Threat to Individual Privacy.

74. The California Consumer Privacy Act (CCPA) defines a data broker as “a business that knowingly collects and sells to third parties the personal information of a consumer with whom the business does not have a direct relationship.” Cal. Civ. Code § 1798.99.80. The CCPA requires a data broker to register with the Attorney General. Oracle is registered as data broker in California pursuant to the CCPA.

75. The New York Times has described data brokers as “Big Brother-in-Law,”¹²² noting that the copious information they compile on individuals is “fused and vetted by algorithm to form an ever-evolving, 360-degree view of U.S. residents’ lives.”¹²³ As described in the Financial Times, “[t]he explosive growth of online data has led to the emergence of the super data broker —the ‘privacy deathstars’, such as Oracle . . . that provide one-stop shopping for hundreds of different data points which can be added into a single person’s file . . . As a result, everyone now is invisibly attached to a living, breathing database that tracks their every move.”¹²⁴

76. Legislators have recognized the privacy-invasive nature of data brokers’ core business practices. The sale of Americans’ information to foreign states is a source of increasing

1 public concern. Senator Ron Wyden, for example, has cited fears about the sale of location data,
 2 credit card purchases, and web browsing to the People’s Republic of China as the impetus for a
 3 bill—the Protecting Americans’ Data From Foreign Surveillance Act—that would largely bar the
 4 export of Americans’ personal data.¹²⁵

5 77. Senator Wyden has also introduced the “Fourth Amendment is Not for Sale Act” to
 6 “put a stop to shady data brokers buying and selling Americans’ Constitutional rights.” The
 7 proposed Act “closes the legal loophole that allows data brokers to sell Americans’ personal
 8 information to law enforcement and intelligence agencies without any court oversight – in contrast
 9 to the strict rules for phone companies, social media sites and other businesses that have direct
 10 relationships with consumers.” As Senator Wyden explained:

11 Doing business online doesn’t amount to giving the government permission to
 12 track your every movement or rifle through the most personal details of your
 13 life ... There’s no reason information scavenged by data brokers should be treated
 14 differently than the same data held by your phone company or email provider. This
 bill closes that legal loophole and ensures that the government can’t use its credit
 card to end-run the Fourth Amendment.¹²⁶

15 78. On December 8, 2021, Senator Wyden, in urging the Consumer Financial
 16 Protection Bureau to take action against data brokers, stated:

17 Data brokers are serving as shady middlemen to sell [consumers’] personal
 18 information without any legal protections . . . Selling personal information that
 people provide to sign up for power, water and other necessities of life, and giving
 them no choice in the matter, is an egregious abuse of consumers’ privacy.¹²⁷

19 79. The FTC has recently warned consumers about the “shadowy” “data broker
 20 ecosystem” where “companies have a profit motive to share data at an unprecedented scale and

granularity,” including a “staggering” amount of “highly personal information that people choose not to disclose even to family, friends, or colleagues.”¹²⁸

80. In the wake of *Dobbs v. Jackson Women’s Health Organization*, No. 19-1392, 142 S. Ct. 2228 (2022), the threat data brokers like Oracle pose to the privacy of individuals seeking information about abortions is significantly magnified. An investigation recently revealed Oracle trackers on the websites of nonprofits providing abortion resources and services, including Planned Parenthood.¹²⁹ Class members who have visited Planned Parenthood’s website in states where abortion is now illegal may have had their personal information tracked and compiled by Oracle, which Oracle may then make available to law enforcement officials.

81. Congressional representatives have expressed intense concern about law enforcement officials using Oracle data to surveil and prosecute individuals researching abortion. House Democrats recently sent Oracle a letter asking it to limit its sale of sensitive location data.¹³⁰ Senators Elizabeth Warren and Wyden have also introduced the “Health and Location Data Protection Act,” which would ban data brokers like Oracle from selling health and location data. As Senators Warren and Wyden state:

Data brokers profit from the location data of millions of people, posing serious risks to Americans everywhere by selling their most private information . . . [w]hen abortion is illegal, researching reproductive health care online, updating a period-tracking app, or bringing a phone to the doctor’s office all could be used to track and prosecute women across the U.S. It amounts to uterus surveillance.¹³¹

¹³¹ Warren, Wyden, Murray, Whitehouse, Sanders Introduce Legislation to Ban Data Brokers from Selling Americans’ Location and Health Data, Elizabeth Warren, United States Senator for Massachusetts (June 15, 2022), <https://www.warren.senate.gov/newsroom/press-releases/warren-wyden-murray-whitehouse-sanders-introduce-legislation-to-ban-data-brokers-from-selling-americans-location-and-health-data> [https://perma.cc/J5XV-JFSR].

82. Consistent with Oracle’s plan of engaging in wide-ranging surveillance of the intimate health details of all Americans, Oracle’s Larry Ellison has announced Oracle’s plan to build “a unified national health records database,” which it is effectuating through its \$28.3 billion acquisition of electronic health record company Cerners. According to Ellison, Oracle is “building a system where the health records [of] all American citizens[] . . . not only exist at the hospital level but also are in a unified national health records database,” apparently to be maintained and controlled by Oracle.¹³² Oracle plans to build this massive health database *prior to even purporting to obtain consent from patients*: “Ellison said this new system will only have anonymous information *until individual patients give consent*.”¹³³

83. Oracle has *itself* acknowledged the highly problematic nature of its own profile-building conduct, albeit indirectly. Without a trace of irony, Oracle has argued to legislators both in the U.S. and internationally that its business rival Google wrongfully builds “shadow profiles,” “using massive amounts of consumer data, not all of which it discloses to consumers, to micro-target[t] advertising” to consumers without their consent. However, Oracle’s description of Google’s conduct is a virtually word-for-word description of its own conduct as a data broker. According to Oracle, Google’s “shadow profiles” are:

[M]assive, largely hidden datasets of online and offline activities. This information is collected through an extensive web of Google [*cf.* Oracle] services, which is difficult, if not impossible to avoid. *It is largely collected invisibly and without consumer consent*. Processed by algorithms and artificial intelligence, this data reveals an intimate picture of a specific consumer’s movements, socio-economics, demographics, “likes,” activities and more. It may or may not be associated with a specific users’ name, but the specificity of this information defines the individual in such detail that a name is unnecessary.¹³⁴

¹³⁴ *Oracle Corporation Submission to the Digital Platforms Inquiry*, Oracle, <https://www.accc.gov.au/system/files/Oracle%20Corporation%20%28March%202019%29.PDF> [https://perma.cc/LHE4-B47C].

1 The hypocrisy of Oracle’s lobbying efforts on this front has been noted by commentators in the
 2 press.¹³⁵

3 **E. Class Members Have Not and Cannot Consent to Oracle’s Collection or Use**
 4 **of their Personal Information.**

5 84. The long-established common law, statutory, and Constitutional rights to privacy
 6 are inherently and inextricably linked to fundamental cultural values of autonomy and freedom.
 7 The concept of “consent” reinforces these cultural values by functioning as a way for individuals
 8 to protect their privacy by exercising control over their personal information—what personal
 9 information organizations can collect, how they can use it, and to whom they can disclose it.
 10 Oracle conducts the business practices alleged in this complaint within a context and in a manner
 11 where consent from the persons whose data it assembles is not reasonably possible or practical, in
 12 fact does not occur, and which in light of the extent of the privacy rights that are violated by
 13 Oracle’s business practices, no consent to such practices could be enforced as a matter of law.

14 85. Plaintiffs and Class members, like our society at large, do not have the practical
 15 choice or ability but to conduct their daily lives substantially in the digital world, connected to the
 16 Internet, with their personal data traveling through cyberspace every day. Because much of daily
 17 activities of life are now conducted online—whether financial, commercial, or social—Internet
 18 activity has become an “exhaustive chronicle” of one’s life. The personal data necessary for these
 19 activities courses through the Internet as these activities take place, and, when aggregated, can
 20 provide deep insight into a person’s thinking, acting, and being. Without an expectation of privacy
 21 on the Internet, there would functionally be no expectation of privacy anywhere.

22 86. Oracle sits atop a complex data collection and processing apparatus feeding its
 23 labyrinthine multinational data marketplace, making it impossible for ordinary persons to
 24 reasonably understand the true purpose and extent of Oracle’s data collection, compiling of digital
 25 dossiers, and other data exploitation practices, which are opaque, if not invisible, to ordinary data

26 ¹³⁵ Mike Masnick, *Oracle’s Projection: As It Accuses Google on Snooping on You, It Has Built a*

[has-built-huge-data-operation-that-it-doesnt-want-regulated/](https://www.techdirt.com/2021/04/09/oracles-projection-as-it-accuses-google-snooping-you-it-has-built-huge-data-operation-that-it-doesnt-want-regulated/) [https://perma.cc/X8WZ-ZUWJ]
 (emphasis added).

1 subjects. Given the complexity and disguised nature of Oracle's collection and use of personal
2 information, and the lack of any direct relationship between Oracle and the Plaintiffs and Class
3 members, there is no reasonable basis for Plaintiffs and the Class members to know the extent to
4 which Oracle is obtaining their data, tracking them, and selling their data or services derived from
5 their data.

6 87. Oracle's presence on the Internet and in the digital world is ubiquitous, by design,
7 and its data gathering activities are constant, vast, and encompasses a massive swath of Internet
8 activity. The breadth and complexity of sources from which Oracle compiles digital dossiers, or
9 profiles, on Class members, including from credit card transactions and interactions with brick-
10 and-mortar establishments, is such that as a practical matter, Plaintiffs and Class members have no
11 way of knowing—and thus no way of even being able to consent to—the actual scope of Oracle's
12 conduct. Plaintiffs and Class members, do not, merely by virtue of conducting the necessary
13 activities of daily life, both online and in the physical world, consent to constant and pervasive
14 surveillance by Oracle and the creation of detailed dossiers about them.

15 88. In as much as the Internet and digital existence has become integral to people's
16 lives, its functioning and complexity with respect to personal data remains opaque to reasonably
17 informed people. The Findings and Declarations of the California Privacy Rights Act (CPRA)
18 notes that the “asymmetry of information” inherent in the “collect[ion] and use [of] consumers’
19 personal information . . . makes it difficult for consumers to understand what they are exchanging
20 and therefore to negotiate effectively with businesses.” There is asymmetry of knowledge
21 between Oracle and the data subjects it exploits, including Plaintiffs and the members of the Class,
22 in that Oracle has an complete knowledge of its data collection and data exploitation practices, but
23 Plaintiffs and Class members have no direct relationship with Oracle regarding these practices and
24 no reasonable basis to discern those practices nor the nature of the practices directed at them.

25 89. Plaintiffs and Class members cannot reasonably foresee all the ways in which
26 Oracle may use the detailed dossiers it is compiling on them. Plaintiffs and Class members have
27 no way of knowing the specific third parties to which Oracle will provide their personal
28 information, or what those third parties will do with that information. Plaintiffs and Class

1 members thus cannot provide knowing and informed consent to Oracle's dissemination of their
2 personal information.

3 90. Oracle makes no pretense of having directly obtained consent from the persons
4 whose data it gathers, including Plaintiffs and the Class members. At no point during its process
5 of collecting or processing personal data, or the compiling of dossiers or selling services based on
6 that personal data, does Oracle ever directly ask individuals for their consent. Oracle legally
7 acknowledges this by virtue of its registration as a data broker wherein it admits it "does not have
8 a direct relationship" with the subjects whose data it exploits. *See* Cal. Civ. Code § 1798.99.80.

9 91. Nor have Plaintiffs and the Class members manifested any form of consent
10 indirectly to Oracle. Oracle publishes so-called privacy policies on its website, but these policies
11 are not reasonably directed to Plaintiffs and Class members, all of whom lack any direct
12 relationship with Oracle and have no reasonable insight into Oracle's data collection and data
13 exploitation practices or how they may or may not be subject to such practices, and therefore there
14 is no reasonable basis for Plaintiffs and Class members to be aware of Oracle's privacy policies or
15 to have directed themselves to them. Plaintiffs and the Class members are not legally subject to or
16 governed by Oracle's published privacy policies.

17 92. Oracle's so-called privacy policies are themselves insufficient to adequately inform
18 Plaintiffs and the Class members about the nature and extent of Oracle's data collection and data
19 exploitation practices, even with regard to their personal data. Plaintiffs and the Class members
20 are in the course of daily life barraged with thousands of pages of purported "terms and
21 conditions" and "privacy policies" for online products and services. Computer science researchers
22 have estimated that, based on the number of unique sites American Internet users visit annually, it
23 would take the average Internet user between 181 to 304 hours to read the relevant privacy
24 policies; this translates to approximately 72 billion hours per year for every U.S. Internet user to
25 read all the privacy policies he or she encounters. Oracle knows, or reasonably should know, that
26 it is not reasonably possible for Internet users to read or comprehend the thousands of privacy
27 policies they encounter, including Oracle's privacy policies.

28

93. As privacy scholars have noted, issues that users must navigate to understand the significance of consent are too complex and the conditions surrounding consent too easy to manipulate for any purported consent to be informed and meaningful.¹³⁶ While, as is well-known, many websites include “cookie popups” that purport to ask for consent for the website placing a cookie on the users’ computer, in practice, most formulations of user control rights fail to sufficiently explain that cookies tracking leads to *profiling* based on information *derived* from user behavior. These practices, whether by Oracle or other third parties, fail to provide sufficient means to obtain the legally viable consent to Oracle’s mass data collection, behavior tracking, and assembling of dossiers based on that data.

94. The content and organization of Oracle’s privacy policies are convoluted, opaque, and not reasonably comprehensible to the average Internet user. Oracle’s website leads to *seven* different privacy policies.¹³⁷ These privacy policies are sometimes complementary, sometimes exclusive, and always vague about how they relate to one another. For example, the “Oracle Advertising Privacy Policy,” the “AddThis Privacy Policy,” and the “Oracle General Privacy Policy” all provide different and non-uniform information about how the company uses cookies, leaving even an informed reader who seeks to educate themselves on how Oracle may be tracking and using their data confused as to what exactly Oracle is doing.¹³⁸

95. Oracle’s privacy policies fail to meaningfully disclose what Oracle does with internet users’ information. Oracle’s so-called privacy policies fail to meaningfully disclose that

¹³⁶ See Alessandro Acquisti, Curtis Taylor et al., *The Economics of Privacy*, 54 J. Econ. Literature 442 (2016), <https://pubs.aeaweb.org/doi/pdfplus/10.1257/jel.54.2.442> [https://perma.cc/3KPV-5WHV]; Woodrow Hartzog, *Privacy’s Blueprint: The Battle to Control the Design of New Technologies* (2018); Nora A. Draper & Joseph Turow, *The Corporate Cultivation of Digital Resignation*, 21 new media & soc’y (2019), <https://doi.org/10.1177/1461444819833331> [https://perma.cc/J8B4-K3ES].

¹³⁷ See, e.g., *Privacy @ Oracle*, Oracle, <https://www.oracle.com/legal/privacy/privacy-policy.html> [https://perma.cc/V848-G7BS] (described as the “General Oracle Privacy Policy,” but also referring to the “Services Privacy Policy” for “information on how Oracle processes services personal information.”).

¹³⁸ *Oracle Advertising Privacy Policy*, Oracle (Last updated May 5, 2022), <https://www.oracle.com/legal/privacy/advertising-privacy-policy.html> [https://perma.cc/MP25-TAXY]; *AddThis Privacy Policy*, Oracle (Last updated May 5, 2022), <https://www.oracle.com/legal/privacy/addthis-privacy-policy.html> [https://perma.cc/E84S-W96V]; *Oracle General Privacy Policy*, Oracle (Last updated May 5, 2022), <https://www.oracle.com/legal/privacy/privacy-policy.html> [https://perma.cc/V848-G7BS].

1 Oracle's customers pay to use Oracle's ID Graph, Data Marketplace, and related services which
 2 Oracle promises will provide near-omniscience into the lives of Internet users.

3 96. The Oracle Advertising Privacy Policy understates the depth of Oracle's
 4 surveillance by failing to disclose its true range of categories of personal information that gives it
 5 visibility into people's lives. This particular policy exclusively uses an example of an internet user
 6 being targeted based on *one* characteristic: their interest in a Hawaiian vacation. Oracle's specific
 7 example is "age bracket 25-55; adventurous traveler; surfing enthusiast; in market for travel
 8 specials to Hawaii."¹³⁹ This sanitized illustration is impossible to square with the total visibility
 9 into Internet users' lives that Oracle provides to clients, and the reality that the segments Oracle
 10 offers regularly stretch to over a thousand categories.

11 97. Oracle is also conspicuously silent about the Data Marketplace in its disclosures.
 12 While the company touts the existence of "the world's largest third-party data marketplace" in
 13 client-facing marketing materials, its privacy policies *do not even mention the Data Marketplace's*
 14 *existence*. Although Oracle boasts elsewhere that the Data Marketplace hosts third parties who
 15 sell internet users' sensitive personal data,¹⁴⁰ Oracle's privacy policies fail to disclose that Oracle
 16 partners with other data brokers, nor provide the identity of these data broker partners.

17 98. The Oracle Advertising Privacy Policy states that Oracle classifies "political ...
 18 orientation" as sensitive information, does not create "interest segments that reflect personal
 19 information that we consider sensitive," and has "operational procedures ... to prevent our partners
 20 and customers from using personal information provided to them by Oracle to create interest
 21 segments that we consider sensitive."¹⁴¹ Any reasonable reader would infer from this that Oracle
 22 does not facilitate the sale of their political views. In fact, the opposite is true: Oracle's
 23

 28 [directory-2810741.pdf](https://web.archive.org/web/20210405154410/https://www.oracle.com/us/solutions/cloud/data-directory-2810741.pdf) [https://perma.cc/EV8L-PG7V].

¹⁴¹ Oracle Advertising Privacy Policy, Oracle (Last updated May 5, 2022),
<https://www.oracle.com/legal/privacy/advertising-privacy-policy.html> [https://perma.cc/MP25-TAXY].

1 advertising materials highlight the fact that data brokers on the Data Marketplace sell data on
2 individuals' politics.¹⁴²

3 99. In practice, the “notice and consent” framework that permeates the Internet is
4 farcical. For example, a recent forensic investigation revealed that, in the context the IAB¹⁴³
5 Europe “Transparency Consent Framework” (TCF), even when users specifically decline consent
6 to be tracked, various adtech participants—including Oracle—ignore those expressions of consent
7 and place trackers on users' devices.¹⁴⁴ The same study discovered that Oracle places tracking
8 cookies on a user's device *before the user even has a chance to decline consent*.¹⁴⁵ The IAB's
9 CCPA Framework is broadly similar to the European TCF, and is directed at Internet users in
10 California.¹⁴⁶

11 100. Neither Oracle's so-called privacy policies, or the policies of third party Internet
12 publishers, could provide any reasonable basis for Plaintiffs and Class members to have consented
13 to Oracle's data collection, compiling of digital dossiers, and other data exploitation practices, or
14

15 ¹⁴²Oracle's professed decision to not selling political data is a recent development. As of 2016, its
16 marketing materials prominently advertised its data on individuals' political views. *The Audience*

1 to have waived their privacy rights, including to be free from Oracle's pervasive surveillance of
2 them.

3 101. Oracle knows, or reasonably should know, that Internet users such as Plaintiffs and
4 Class members have insufficient knowledge or basis to reasonably comprehend the extent to
5 which Oracle is obtaining their data, tracking their activity, and compiling it into digital dossiers,
6 nor the deeply invasive and detailed nature of those dossiers. Oracle makes no disclosure
7 anywhere directly to Plaintiffs or Class members of these practices. To the extent Plaintiffs or
8 Class members indirectly acknowledge to third parties the presence of some aspect of an isolated
9 data collection practice, or tracking cookie on an individual website, such acknowledgement in no
10 way does or could reflect any consent or sufficient understanding of Oracle's practices.

11 102. As a data broker, Oracle effectuates ongoing, comprehensive surveillance of the
12 Plaintiffs and Class members which grievously intrudes upon their privacy and which inevitably
13 results in the corrosion of their individual autonomy and the collective autonomy of the society at
14 large. Ordinary people, such as the Class members, do not and cannot possess an appropriate level
15 of knowledge about the substantial threats that Oracle's surveillance poses to their own autonomy
16 (in addition to lacking information sufficient to comprehend the nature and extent of Oracle's
17 surveillance and its other implications). The social harms posed by Oracle's conduct impair not
18 only individual autonomy, but the collective autonomy of Class members, as all members of a
19 society have an interest in the enforcement of privacy rights, freedom from surveillance, and
20 preservation of autonomy. Evisceration of these privacy values inexorably leads to the abrogation
21 of the autonomy and freedom of the citizenry which are essential to the proper functioning of
22 democratic republics. These harms caused by Oracle far outweigh the commercial benefits that
23 extend to a private corporation. In the context of Oracle's practices, valid consent from Plaintiffs
24 and the Class members is not only absent, it is not even possible.

25 103. Plaintiffs and Class members in fact have not waived their fundamental right to be
26 free from the pervasive surveillance Oracle subjects them to. In any event, even were there any
27 basis to conclude that Plaintiffs and Class members could be considered to have waived their
28

reasonable expectation of privacy with respect to Oracle's practices (and there is not), such waiver would be void and invalid as against public policy.

VII. CLASS ALLEGATIONS

104. Plaintiffs bring this class action, pursuant to Rule 23 of the Federal Rules of Civil Procedure, individually and on behalf of all members of the following classes, which are jointly referred to throughout this Complaint as the "Classes:"

Worldwide Class:

All natural persons whose personal information, or data derived from their personal information, was used to create a profile and made available for sale or use through Oracle's ID Graph or Data Marketplace.

United States Sub-Class:

All natural persons located in the United States whose personal information, or data derived from their personal information, was used to create a profile and made available for sale or use through Oracle's ID Graph or Data Marketplace.

California Sub-Class:

All natural persons located in California whose personal information, or data derived from their personal information, was used to create a profile and made available for sale or use through Oracle's ID Graph or Data Marketplace.

California Invasion of Privacy Act ("CIPA") Sub-Class:

All members of the California Sub-Class whose contents of their electronic communications were intercepted by the use of Oracle's bk-coretag.js functionality.

Electronic Communications Privacy Act ("ECPA") Sub-Class:

All members of the United States Sub-Class whose contents of their electronic communications were intercepted by the use of Oracle's bk-coretag.js functionality.

105. Excluded from the Classes are the following individuals: officers and directors of Oracle and its parents, subsidiaries, affiliates, and any entity in which Oracle has a controlling interest; and all judges assigned to hear any aspect of this litigation, as well as their immediate family members.

106. Plaintiffs reserve the right to modify or amend the definition of each of the proposed Classes before the Court determines whether certification is appropriate.

107. This action readily satisfies the requirements set forth under Federal Rule of Civil Procedure 23:

a. Each Class is so numerous that joinder of all members is impracticable. Upon information and belief, Class members number in the millions.

b. There are questions of law or fact common to the Classes. These questions include, but are not limited to, the following:

- 1) Whether Oracle's acts and practices complained of herein amount to egregious breaches of social norms;
- 2) Whether Oracle acted intentionally in violating Plaintiffs' and Class members' privacy rights;
- 3) Whether Oracle was unjustly enriched as a result of its violations of Plaintiffs' and Class members' privacy rights;
- 4) Whether an injunction should issue; and
- 5) Whether declaratory relief should be granted.

c. Plaintiffs' claims are typical of the claims of the Classes. Plaintiffs and the Class members did not consent to Oracle's interception, collection, analysis, and sale of their personal information, which acts form the basis for this suit.

d. Moreover, like all Class members, Plaintiffs suffer a substantial risk of repeated injury in the future. Each Plaintiff continues to use devices that are capable of reporting personal information to Oracle. Oracle's actions have thwarted and continue to threaten Plaintiffs' (and Class members') ability to exercise control over their own privacy while using their devices. Because the conduct complained of herein is systemic, Plaintiffs and all Class members face substantial risk of the same injury in the future. Oracle's conduct is common to all Class members and represents a common pattern of conduct resulting in injury to all members of the Classes. Plaintiffs have suffered the harm alleged and have no interests antagonistic to any other Class member.

e. Plaintiffs will fairly and adequately protect the interests of the Classes. Plaintiffs' interests do not conflict with the interests of the Class members. Furthermore,

1 Plaintiffs have retained competent counsel experienced in class action litigation, consumer
 2 protection litigation, and electronic privacy litigation. Plaintiffs' counsel will fairly and
 3 adequately protect and represent the interests of the Classes. Federal Rule of Civil Procedure
 4 23(a)(4) and 23(g) are satisfied.

5 f. In acting as above-alleged, Oracle has acted on grounds generally
 6 applicable to the Classes, thereby making final injunctive relief and corresponding declaratory
 7 relief each appropriate with respect to the Classes as a whole. The prosecution of separate actions
 8 by individual Class members would create the risk of inconsistent or varying adjudications with
 9 respect to individual Class members that would establish incompatible standards of conduct for
 10 Oracle.

11 **VIII. CAUSES OF ACTION**

12 **First Cause of Action** 13 **Invasion of Privacy Under the California Constitution** 14 **(on behalf of the California Sub-Class)**

15 108. Plaintiff Katz-Lacabe and the California Subclass members repeat and reallege all
 16 preceding paragraphs contained herein.

17 109. Article I, section 1 of the California Constitution provides: "All people are by
 18 nature free and independent and have inalienable rights. Among these are enjoying and defending
 19 life and liberty, acquiring, possessing, and protecting property and pursuing and obtaining safety,
 20 happiness, *and privacy*." The phrase "*and privacy*" was added by the "Privacy Initiative" adopted
 21 by California voters in 1972.

22 110. The phrase "and privacy" was added in 1972 after voters approved a proposed
 23 legislative constitutional amendment designated as Proposition 11. Proposition 11 was intended to
 24 curb businesses' control over the unauthorized collection and use of peoples' personal
 25 information, as the ballot argument stated:

26 The right of privacy is the right to be left alone...It prevents government and
 27 business interests from collecting and stockpiling unnecessary information about
 28 us and from misusing information gathered for one purpose in order to serve other
 purposes or to embarrass us. Fundamental to our privacy is the ability to control

1 circulation of personal information. This is essential to social relationships and
2 personal freedom.¹⁴⁷

3 111. This amended constitutional provision addresses the concern over accelerating
4 encroachment on personal freedom and security caused by increasing surveillance and data
5 collection activity in contemporary society. Its proponents meant to afford individuals more
6 measure of protection against this most modern threat to personal privacy: :

7 Computerization of records makes it possible to create ‘cradle-to-grave’ profiles of
8 every American. At present there are no effective restraints on the information
9 activities of government and business. This amendment creates a legal and
10 enforceable right of privacy for every Californian.¹⁴⁸

11 In recognizing these privacy rights, the California Constitution provides insight into and serves to
12 define the nature of the reasonable expectation of privacy of an objectively reasonable California
13 resident. In contravention to the California Constitution and the reasonable expectations of
14 privacy of California residents, Oracle “stockpil[es] unnecessary information about [Class
15 members] and [] misus[es] information gathered for one purpose in order to serve other purposes,”
16 creating “cradle-to-grave” profiles of Class members.

17 112. Plaintiff Katz-Lacabe and the California Subclass members maintain a reasonable
18 expectation of privacy in the conduct of their lives, including their internet browsing activities and
19 in their electronic communications and exchange of personal data. The reality of modern life
20 increasingly requires that much of our daily activities are conducted online – Plaintiff Katz-Lacabe
21 and the California Subclass members have no practical choice or ability but to conduct their daily
22 lives substantially in the digital world, connected to the Internet. The necessary engagement with
23 the digital world makes Plaintiff Katz-Lacabe’s and the California Subclass members’ private lives
24 susceptible to unlawful observation and recording, capable of yielding an comprehensive and
25 intrusive chronicle of Plaintiff Katz-Lacabe’s and the California Subclass members’ lives. If
26 Plaintiff Katz-Lacabe and the California Subclass members do not have a reasonable expectation
27 of privacy in the conduct of their lives online and the digital transmission of their personal data,
28 they can have no reasonable expectation of privacy for virtually any facet of their lives.

¹⁴⁷ Ballot Pamp., Proposed Stats. & Amends. To Cal. Const. With Arguments to Voters. Gen. Election *26 (Nov. 7, 1972).

¹⁴⁸ *Id.*

113. Oracle, in violation of Plaintiff Katz-Lacabe's and the California Subclass members' reasonable expectation of privacy, intercepts, collects, tracks and compiles their web browsing activity and communications.

114. The nature and volume of the web browsing data collected is such that Oracle's practice of compiling dossiers based on the data it collects violates Plaintiff Katz-Lacabe's and the California Subclass members' reasonable expectation of privacy. Technological advances, such as Oracle's use of cookies, pixels, JavaScript, and other means to track and compile internet browsing activity, electronic purchases, and electronic communications, provide Oracle with the means to assemble a comprehensive chronicle of Plaintiff Katz-Lacabe's and the California Subclass members' lives heretofore unseen. Oracle collects and compiles personal information such as Plaintiff Katz-Lacabe's and the California Subclass members' email addresses, location data, and web browsing information, including that relating to race, religion, sexual orientation, and health. Such information is "personal information" under California law, which defines personal information as including "Internet or other electronic network activity information," such as "browsing history, search history, and information regarding a consumer's interaction with an internet website, application, or advertisement." Cal. Civ. Code § 1798.140.

115. Oracle also collects and analyzes Plaintiff Katz-Lacabe's and the California Subclass members' real-world offline activity, including activities like brick-and-mortar store purchases and location information, and compiles computerized records of those activities. Plaintiff Katz-Lacabe and the California Subclass members do not and cannot know which specific real-world offline activities Oracle may or may not be collecting and analyzing and adding to the digital dossiers it compiles on them.

116. Oracle's conduct as described herein is highly offensive to a reasonable person and constitutes an egregious breach of social norms, specifically including the following:

a. Oracle engages in dragnet-style collection and interception of Plaintiff Katz-Lacabe's and the California Subclass members Internet activity, including their communications with websites, thereby learning intimate details of their daily lives based on the massive amount of information collected about them.

1 b. Oracle also collects minute details about Plaintiff Katz-Lacabe's and the
 2 California Subclass members' *offline* activities, including their brick-and-mortar purchases and
 3 location information. By its very nature, Plaintiff Katz-Lacabe and the California Subclass
 4 members cannot be aware of or consent to this conduct.

5 c. Oracle creates dossiers based on this online and offline data, which
 6 constitute precisely the sort of "cradle-to-grave profiles" the right to privacy under the California
 7 Constitution was created to constrain.

8 117. Oracle's amassing of the electronic information reflecting all aspects of Plaintiff
 9 Katz-Lacabe's and the California Subclass members' lives into dossiers for future or present use is
 10 in and of itself a violation of Plaintiff Katz-Lacabe's and the California Subclass members' right to
 11 privacy in light of the serious risk these dossiers pose to their autonomy. Additionally, those
 12 dossiers are and can be used to further invade Plaintiffs' privacy, by, inter alia, allowing third
 13 parties to learn intimate details of Plaintiff Katz-Lacabe's and the California Subclass members'
 14 lives, and target them for advertising, political, and other purposes, as described herein, thereby
 15 harming them through the abrogation of their autonomy and their ability to control dissemination
 16 and use of information about them. Additionally, as described above, the social harms posed by
 17 Oracle's conduct impair not only individual autonomy, but the collective autonomy of Class
 18 members, which autonomy is essential to the proper functioning of democratic republics.

19 118. Privacy advocates have repeatedly decried Oracle's practices. Oracle's conduct
 20 described herein has been the subject of numerous legal complaints and lawsuits in Europe and the
 21 U.K. by privacy advocates.

22 119. Legislators have recognized the pernicious and privacy-invasive nature of Oracle's
 23 conduct as described herein. Senator Wyden, in urging the Consumer Financial Protection Bureau
 24 to take action against data brokers, stated that "[d]ata brokers are serving as shady middlemen to
 25 sell [consumers'] personal information without any legal protections" and that selling consumers'
 26 personal information "giving them no choice in the matter, is an egregious abuse of consumers'
 27 privacy." Senators Warren and Wyden have also stated that "[d]ata brokers profit from the
 28 location data of millions of people, posing serious risks to Americans everywhere by selling their

1 most private information.” The FTC has also warned consumers about the “shadowy” “data
2 broker ecosystem” where “companies have a profit motive to share data at an unprecedented scale
3 and granularity,” including a “staggering” amount of “highly personal information that people
4 choose not to disclose even to family, friends, or colleagues.”¹⁴⁹

5 120. Oracle has violated Plaintiff Katz-Lacabe’s and the California Subclass members’
6 reasonable expectation of privacy via Oracle’s review, analysis, dissemination and subsequent
7 uses of Plaintiffs’ and Class members’ private and other browsing activity through Oracle’s Data
8 Cloud, ID Graph and Data Marketplace.

9 121. Oracle’s practices as alleged herein violate Plaintiff Katz-Lacabe’s and the
10 California Subclass members’ reasonable expectation of privacy and are highly offensive to a
11 reasonable person, and constitute an egregious breach of the social norms.

12 122. The right to privacy in California’s constitution creates a right of action for
13 California residents against private entities such as Oracle. Oracle lacks a legitimate business
14 interest in stockpiling and compiling the personal information of Plaintiff Katz-Lacabe and the
15 California Subclass members.

16 123. Plaintiff Katz-Lacabe and the California Subclass members have been damaged by
17 Oracle’s invasion of their privacy and are entitled to just compensation and injunctive relief.

18 **Second Cause of Action**
19 **Intrusion Upon Seclusion Under California Common Law**
20 **(on behalf of all Classes)**

21 124. Plaintiffs repeat and reallege all preceding paragraphs contained herein.

22 125. Plaintiffs asserting claims for intrusion upon seclusion must plead (1) intrusion into
23 a private place, conversation, or matter; (2) in a manner highly offensive to a reasonable person.

24 126. Plaintiffs and Class members maintain a reasonable expectation of privacy in the
25 conduct of their lives, including their Internet browsing activities and in their electronic
26 communications and exchange of personal data. The reality of modern life increasingly requires

27 ^{149 149} Kristin Cohen, *Location, Health, and Other Sensitive Information: FTC Committed to Fully*
28 *Enforcing the law Against Illegal Use and Sharing of Highly Sensitive Data*, The Federal Trade

[<https://perma.cc/V6XT-85YX>].

1 that much of our daily activities are conducted online – Plaintiffs and Class members have no
2 practical choice or ability but to conduct their daily lives substantially in the digital world,
3 connected to the Internet. The necessary engagement with the digital world makes Plaintiffs’ and
4 Class members’ private lives susceptible to unlawful observation and recording that is capable of
5 yielding an comprehensive and intrusive chronicle of Plaintiffs’ and Class members’ lives. If
6 Plaintiffs and Class members do not have reasonable expectation of privacy in the conduct of their
7 lives online and the digital transmission of their personal data, they can have no reasonable
8 expectation of privacy for virtually any facet of their lives.

9 127. Oracle, in violation of Plaintiffs’ and Class members’ reasonable expectation of
10 privacy, intercepts, collects, tracks and compiles their web browsing activity and communications.

11 128. The nature and volume of the web browsing data collected is such that Oracle’s
12 practice of compiling dossiers based on the data it collects violates’ Plaintiffs’ and Class members’
13 reasonable expectation of privacy. Technological advances, such as Oracle’s use of cookies,
14 pixels, and other means to track and compile internet browsing activity, electronic purchases, and
15 electronic communications, provide Oracle with the means to assemble a comprehensive chronicle
16 of Plaintiffs’ and Class members’ lives heretofore unseen. Oracle collects and compiles personal
17 information such as Plaintiffs’ and Class members’ email addresses, location data, and web
18 browsing information, including that relating to race, religion, sexual orientation, and health. Such
19 information is “personal information” under California law which defines personal information as
20 including “Internet or other electronic network activity information,” such as “browsing history,
21 search history, and information regarding a consumer’s interaction with an internet website,
22 application, or advertisement.” Cal. Civ. Code § 1798.140.

23 129. Oracle also collects and analyzes Plaintiffs’ and Class members’ real-world offline
24 activity, including activities like brick-and-mortar store purchases and location information, and
25 compiles computerized records of those activities. Plaintiffs and Class members do not and cannot
26 know which specific real-world offline activities Oracle may or may not be collecting and
27 analyzing and adding to the digital dossiers it compiles on them.
28

1 130. Oracle's conduct as described herein is highly offensive to a reasonable person and
2 constitutes an egregious breach of social norms, specifically including the following:

3 a. Oracle engages in dragnet-style collection and interception of Plaintiffs'
4 and Class members' Internet activity, including their communications with websites, thereby
5 learning intimate details of their daily lives based on the massive amount of information collected
6 about them.

7 b. Oracle also collects minute details about Plaintiffs' and Class Members'
8 *offline* activities, including their brick-and-mortar purchases and location information. By its
9 very nature, Plaintiffs and Class members cannot be aware of or consent to this conduct.

10 c. Oracle creates dossiers based on this online and offline data, which
11 constitute precisely the sort of "cradle-to-grave profiles" the right to privacy under the California
12 Constitution was created to constrain.

13 131. Oracle's amassing of the electronic information reflecting all aspects of Plaintiffs'
14 and Class Members' lives into dossiers for future or present use is in and of itself a violation of
15 Plaintiffs' and Class Members' right to privacy in light of the serious risk these dossiers pose to
16 their autonomy. Additionally, those dossiers are and can be used to further invade Plaintiffs' and
17 Class Members' privacy, by, inter alia, allowing third parties to learn intimate details of Plaintiffs'
18 and Class Members' lives, and target them for advertising, political, and other purposes, as
19 described herein, thereby harming them through the abrogation of their autonomy and their ability
20 to control dissemination and use of information about them. Additionally, as described above, the
21 social harms posed by Oracle's conduct impair not only individual autonomy, but the collective
22 autonomy of Class members, which autonomy is essential to the proper functioning of democratic
23 republics.

24 132. Privacy advocates have repeatedly decried Oracle's practices. Oracle's conduct
25 described herein has been the subject of numerous legal complaints and lawsuits in Europe and the
26 U.K. by privacy advocates.

27 133. Legislators have recognized the pernicious and privacy-invasive nature of Oracle's
28 conduct as described herein. Senator Wyden, in urging the Consumer Financial Protection Bureau

1 to take action against data brokers, stated that “[d]ata brokers are serving as shady middlemen to
 2 sell [consumers’] personal information without any legal protections” and that selling consumers’
 3 personal information and “giving them no choice in the matter, is an egregious abuse of
 4 consumers’ privacy.” Senators Warren and Wyden have also stated that “[d]ata brokers profit
 5 from the location data of millions of people, posing serious risks to Americans everywhere by
 6 selling their most private information.” The FTC has also warned consumers about the “shadowy”
 7 “data broker ecosystem” where “companies have a profit motive to share data at an unprecedented
 8 scale and granularity,” including a “staggering” amount of “highly personal information that
 9 people choose not to disclose even to family, friends, or colleagues.”¹⁵⁰

10 134. Oracle has violated Plaintiffs’ and Class members’ reasonable expectation of
 11 privacy via Oracle’s review, analysis, dissemination and subsequent uses of Plaintiffs’ and Class
 12 members’ private and other browsing activity through Oracle’s Data Cloud, ID Graph, and Data
 13 Marketplace.

14 135. Oracle’s practices as alleged herein violate Plaintiffs’ and Class members’
 15 reasonable expectation of privacy and are highly offensive to a reasonable person, and constitute
 16 an egregious breach of the social norms.

17 136. Oracle lacks a legitimate business interest in stockpiling and compiling the personal
 18 information of Plaintiffs and Class members.

19 137. Plaintiffs and Class members have been damaged by Oracle’s invasion of their
 20 privacy and are entitled to just compensation and injunctive relief.

21 **Third Cause of Action**
 22 **Violations of the Unfair Competition Law (“UCL”),**
 23 **Cal. Bus. & Prof Code § 17200, et seq.**
 24 **(on behalf of all Classes)**

25 138. Plaintiffs repeat and reallege all preceding paragraphs contained herein.

26 ¹⁵⁰ Kristin Cohen, *Location, Health, and Other Sensitive Information: FTC Committed to Fully*
 27 *Enforcing the law Against Illegal Use and Sharing of Highly Sensitive Data*, The Federal Trade
 28 Commission (July 11, 2022), <https://www.ftc.gov/business-guidance/blog/2022/07/location-health-other-sensitive-information-ftc-committed-fully-enforcing-law-against-illegal-use>
 [https://perma.cc/V6XT-85YX].

1 139. The UCL prohibits any “unlawful, unfair, or fraudulent business act or practice and
2 unfair, deceptive, untrue or misleading advertising.” Cal. Bus. & Prof. Code § 17200 (UCL). By
3 engaging in the practices aforementioned, Oracle has violated the UCL.

4 140. Oracle’s “unlawful” acts and practices include violation of the California
5 Constitution right to privacy as well as intrusion upon seclusion.

6 141. Oracle’s conduct violates the spirit and letter of these laws, which protect property,
7 economic and privacy interests and prohibit unauthorized disclosure and collection of private
8 communications and personal information.

9 142. Oracle’s “unfair” acts and practices include its violation of property, economic and
10 privacy interests protected by the statutes identified in paragraphs 149-172. To establish liability
11 under the unfair prong, Plaintiffs and Class members need not establish that these statutes were
12 actually violated, although the claims pleaded herein do so.

13 143. Plaintiffs and Class members have suffered injury-in-fact, including the loss of
14 money and/or property as a result of Oracle’s unfair and/or unlawful practices, to wit, the
15 collection and use of their personal information and related profiling, without their knowledge and
16 consent, which has value as demonstrated by its use and sale by Oracle.

17 144. Oracle’s actions caused damage to and loss of Plaintiffs’ and Class members’
18 property right to control the dissemination and use of their personal information and
19 communications.

20 145. Oracle reaped unjust profits and revenues in violation of the UCL. This includes
21 Oracle’s profits and revenues from its use of Class members’ data and the improvement of
22 Oracle’s other products. Plaintiffs and the Classes seek restitution and disgorgement of these
23 unjust profits and revenues.

24 146. Oracle’s use of Class members’ personal data is directly connected to its products’
25 commercial purposes: Oracle’s Data Cloud, ID Graph, and Data Marketplace would be worthless
26 without Class members’ personal information. Class members’ personal data is not ancillary to
27 these products—it is the product. Oracle’s marketing strategy thus relies on emphasizing the vast
28 quantity of personal data that it can provide to clients.

147. Because Plaintiffs and Class members lack full knowledge of Oracle’s practices, they cannot consent to the data security risks that are inherent in Oracle’s surveillance practices. In 2020, a server holding BlueKai records was left unsecured, exposing “names, home addresses, email addresses and other identifiable data in the database. The data also revealed sensitive users’ web browsing activity — from purchases to newsletter unsubscribes.”¹⁵¹ Plaintiffs and Class members were unaware of and did not consent to subjecting their personal data to such security risks.

148. As a result of its unlawful and unfair business practices, Oracle has reaped and continues to reap unfair and illegal profits at the expense of the Plaintiffs and Class members. Thus, Oracle should be required to disgorge its illegal profits, and to pay the Plaintiffs and Class members restitution in an amount according to proof at the time of trial.

Fourth Cause of Action
Violation of the California Invasion of Privacy Act
(on behalf of the CIPA Sub-Class)

149. Plaintiffs repeat and reallege all preceding paragraphs contained herein.

150. The California Invasion of Privacy Act (“CIPA”) is codified at Cal. Penal Code §§ 630 to 638. The Act begins with its statement of purpose:

The Legislature hereby declares that advances in science and technology have led to the development of new devices and techniques for the purpose of eavesdropping upon private communications and that the invasion of privacy resulting from the continual and increasing use of such devices and techniques has created a serious threat to the free exercise of personal liberties and cannot be tolerated in a free and civilized society.

151. California Penal Code § 631(a) provides, in pertinent part:

Any person who, by means of any machine, instrument, or contrivance, or in any other manner . . . willfully and without the consent of all parties to the communication, or in any unauthorized manner, reads, or attempts to read, or to learn the contents or meaning of any message, report, or communication while the same is in transit or passing over any wire, line, or cable, or is being sent from, or received at any place within this state; or who uses, or attempts to use, in any manner, or for any purpose, or to communicate in any way, any information so obtained, or who aids, agrees with, employs, or conspires with any person or persons to lawfully do, or permit, or cause to be done any of the acts or things

¹⁵¹ Zack Whittaker, *Oracle’s BlueKai Tracks You Across the Web. That Data Spilled Online*, Tech Crunch (June 19, 2020, 7:30 AM), <https://techcrunch.com/2020/06/19/oracle-bluekai-web-tracking/> [https://perma.cc/9KM5-MG9D].

mentioned above in this section, is punishable by a fine not exceeding two thousand five hundred dollars

Under either section of the CIPA, a defendant must show it had the consent of all parties to a communication.

152. Oracle utilizes a proprietary software device, referred to as “bk-coretag.js” JavaScript code, to “extract,” or intercept, “user attributes,” which include the contents of users’ communications with websites, and secretly sends them to Oracle while the users are in the process of communicating with those websites. Oracle’s technical documentation explains that bk-coretag.js JavaScript code deployed by Oracle collects “user attributes” “such as product views, purchase intent, [and] add-to-cart actions”¹⁵² and other communications that users have with websites and simultaneously copies and sends those communications to Oracle.

153. Oracle places the bk-coretag.js JavaScript code on Internet users’ electronic devices when they browse a website that contains certain Oracle code. Oracle uses the bk-coretag.js JavaScript code to intercept the contents of Internet users’ communications with websites as described at paragraphs 29-35 above. At all relevant times, Oracle’s tracking and interceptions of Plaintiff Katz-Lacabe’s and CIPA Sub-Class members’ internet communications was without authorization and consent from Plaintiff Katz-Lacabe and CIPA Sub-Class members. The interception by Oracle in the aforementioned circumstances were unlawful and tortious.

154. Oracle’s non-consensual tracking of Plaintiff Katz-Lacabe’s and CIPA Sub-Class members’ internet communications was designed to attempt to learn at least some meaning of the content in the URLs and other data interception.

155. The following items constitute “machine[s], instrument[s], or contrivance[s]” under the CIPA, and even if they do not, Oracle’s deliberate and admittedly purposeful scheme that facilitated its interceptions falls under the broad statutory catch-all category of “any other manner”:

¹⁵² *Oracle Data Cloud Core Tag Implementation*, Oracle, https://docs.oracle.com/en/cloud/saas/data-cloud/data-cloud-help-center/IntegratingBlueKaiPlatform/DataIngest/coretag_implementation.html [https://perma.cc/8XVU-8Z2F].

- a. The computer codes and programs Oracle used to track Plaintiffs Katz-Lacabe's and Class members' communications, including JavaScript;
- b. Plaintiffs Katz-Lacabe's and CIPA Sub-Class members' browsers and mobile applications;
- c. Plaintiffs Katz-Lacabe's and CIPA Sub-Class members' computing and mobile devices;
- d. The computer codes and programs used by Oracle to effectuate its tracking and interception of the Plaintiffs Katz-Lacabe's and CIPA Sub-Class members'; and
- e. The plan Oracle carried out to effectuate its tracking and interception of Plaintiffs Katz-Lacabe's and Class members' communications.

156. Plaintiff Katz-Lacabe and CIPA Sub-Class members have suffered loss by reason of these violations, including, but not limited to, violation of their rights to privacy and loss of value in their personally-identifiable information.

157. Pursuant to California Penal Code § 637.2, Plaintiffs Katz-Lacabe and CIPA Sub-Class members have been injured by the violations of California Penal Code § 631, and each seek damages for the greater of \$5,000 or three times the amount of actual damages, as well as injunctive relief.

Fifth Cause of Action
Violation of the Federal Wiretap Act, 18 U.S.C. § 2510, et. seq.
(on behalf of the ECPA Sub-Class)

158. The Federal Wiretap Act, as amended by the Electronic Communications Privacy Act of 1986, prohibits the intentional interception of the contents any wire, oral, or electronic communication through the use of a device. 18 U.S.C. § 2511.

159. The Wiretap Act protects both the sending and receipt of communications.

160. 18 U.S.C. § 2520(a) provides a private right of action to any person whose "wire, oral, or electronic communication is intercepted, disclosed, or intentionally used "in violation of the Wiretap Act.

161. As described above, Oracle intercepts Plaintiffs Katz-Lacabe's and Golbeck's and ECPA Sub-Class members' communications with websites by placing tracking devices, namely

1 the bk-coretag.js JavaScript code, on Plaintiffs Katz-Lacabe's and Golbeck's and ECPA Sub-
 2 Class members' devices while they are browsing the Internet. This code transmits to Oracle the
 3 specific webpages and information about the webpages Plaintiffs Katz-Lacabe and Golbeck and
 4 ECPA Sub-Class members' are browsing, as well as the other data described herein, which
 5 Oracle uses to enrich the dossiers it compiles on Plaintiffs Katz-Lacabe and Golbeck and ECPA
 6 Sub-Class members.

7 162. Oracle's actions in intercepting and tracking user communications while they were
 8 browsing the internet was intentional. On information and belief, Oracle is aware that it is
 9 intercepting communications in these circumstances and has taken no remedial action.

10 163. Oracle's interception of internet communications that Plaintiffs Katz-Lacabe and
 11 Golbeck and ECPA Sub-Class members were sending and receiving was done
 12 contemporaneously with the sending and receipt of those communications.

13 164. The communications intercepted by Oracle include "contents" of electronic
 14 communications made from Plaintiffs Katz-Lacabe and Golbeck and ECPA Sub-Class members
 15 to websites other than those operated by Oracle in the form of:

- 16 a. the URLs being browsed by the Internet user as well as the referrer URL;
- 17 b. webpage title;
- 18 c. webpage keywords;
- 19 d. the exact date and time of the website visit;
- 20 e. the IP address of the user's computer;
- 21 f. "product page visits"
- 22 g. "purchase intent" signals;
- 23 h. "add-to-cart actions"; and
- 24 i. data entered by the user into forms on the website.

25 165. The transmission of data between Plaintiffs Katz-Lacabe and Golbeck and ECPA
 26 Sub-Class members on the one hand and the websites on which Oracle tracked and intercepted
 27 their communications on the other, without authorization were "transfer[s] of signs, signals,
 28 writing, . . . data, [and] intelligence of [some] nature transmitted in whole or in part by a wire,

1 radio, electromagnetic, photoelectronic, or photooptical system that affects interstate
2 commerce[,]” and were therefore “electronic communications” within the meaning of 18 U.S.C. §
3 2510(12).

4 166. The following constitute “devices” within the meaning of 18 U.S.C. § 2510(5):

5 a. The computer codes and programs Oracle used to track Plaintiffs Katz-
6 Lacabe’s and Golbeck’s and ECPA Sub-Class members’ communications, including JavaScript
7 code;

8 b. Plaintiffs Katz-Lacabe’s and Golbeck’s and ECPA Sub-Class members’
9 browsers and mobile applications;

10 c. Plaintiffs Katz-Lacabe’s and Golbeck’s and ECPA Sub-Class members’
11 computing and mobile devices;

12 d. The computer codes and programs used by Oracle to effectuate its tracking
13 and interception of the Plaintiffs’ and Class members’ communications; and

14 e. The plan Oracle carried out to effectuate its tracking and interception of the
15 Plaintiffs Katz-Lacabe’s and Golbeck’s and ECPA Sub-Class members’ communications while
16 browsing the internet.

17 167. Oracle, in its conduct alleged here, was not providing an “electronic
18 communication service,” as that term is defined in 18 U.S.C. § 2510(12) and is used elsewhere in
19 the Wiretap Act. Oracle was not acting as an Internet Service Provider (ISP).

20 168. Oracle was not an authorized party to the communication because Plaintiffs Katz-
21 Lacabe and Golbeck and ECPA Sub-Class members were unaware of Oracle’s interception of
22 their communications with websites, and did not knowingly send any communication to Oracle.
23 Oracle could not manufacture its own status as a party to Plaintiffs Katz-Lacabe’s and Golbeck’s
24 and ECPA Sub-Class members’ communications with others by surreptitiously intercepting those
25 communications.

26 169. As described above, the communications between Plaintiffs Katz-Lacabe and
27 Golbeck and ECPA Sub-Class members on the one hand, and websites on the other, were
28

1 simultaneous to, but *separate* from, the channel through which Oracle acquired the contents of
2 those communications.

3 170. The interception by Oracle in the aforementioned circumstances was performed for
4 the secondary and independent purpose of committing tortious acts in violation of the law,
5 specifically:

6 a. Violating the California Constitution's prohibition on the compiling of
7 electronic dossiers, which dossiers are enriched by the contents of the communications
8 intercepted by Oracle, as described herein;

9 b. Violating the tort of intrusion upon seclusion by using the contents of the
10 intercepted communications to create detailed profiles on Plaintiffs Katz-Lacabe and Golbeck and
11 ECPA Sub-Class members, and then making those profiles available through Oracle's Data
12 Cloud, ID Graph, and Data Marketplace, as described herein;

13 c. Violating the Unfair Competition Law ("UCL"), Cal. Bus. & Prof Code §
14 17200, et seq., as described herein.

15 171. After intercepting the communications, Oracle then used the contents of the
16 communications knowing or having reason to know that such information was obtained through
17 the interception of electronic communications in violation of 18 U.S.C. § 2511(1)(a).

18 172. As a result of the above actions and pursuant to 18 U.S.C. § 2520, the Court may
19 assess statutory damages to Plaintiffs Katz-Lacabe and Golbeck and ECPA Sub-Class members;
20 injunctive and declaratory relief; punitive damages in an amount to be determined by a jury, but
21 sufficient to prevent the same or similar conduct by Oracle in the future, and a reasonable
22 attorney's fee and other litigation costs reasonably incurred.

23 **Sixth Cause of Action**
24 **Unjust Enrichment**
(on behalf of all Classes)

25 173. Plaintiffs repeat and reallege all preceding paragraphs contained herein.

26 174. Oracle has wrongfully and unlawfully trafficked in the named Plaintiffs' and the
27 Class members' personal information and other personal data without their consent for substantial
28 profits.

175. Plaintiffs' and Class members' personal information and data have conferred an economic benefit on Oracle.

176. Oracle has been unjustly enriched at the expense of Plaintiffs and Class members, and the company has unjustly retained the benefits of its unlawful and wrongful conduct.

177. It would be inequitable and unjust for Oracle to be permitted to retain any of the unlawful proceeds resulting from its unlawful and wrongful conduct.

178. Plaintiffs and Class members accordingly are entitled to equitable relief including restitution and disgorgement of all revenues, earnings, and profits Oracle obtained as a result of its unlawful and wrongful conduct.

Seventh Cause of Action
Declaratory Judgment that Oracle Wrongfully Accessed, Collected, Stored,
Disclosed, Sold, and Otherwise Improperly Used Plaintiffs' Private Data
and Injunctive Relief
(on behalf of all Classes)

179. Plaintiffs incorporate the substantive allegations contained in all prior and succeeding paragraphs as if fully set forth herein.

180. The gravamen of this controversy lies in Oracle's collection, tracking, and analysis of Plaintiffs' and Class members' personal information and behavior, and building dossiers based on that information and providing that information to third parties. Plaintiffs and Class members never consented to, or were even aware of, Oracle's conduct described herein.

181. Oracle's misconduct has put Plaintiffs' and Class members' privacy and autonomy at risk, and violated their dignitary rights, privacy, and economic well-being.

182. Accordingly, Plaintiffs seek appropriate declaratory relief, and injunctive relief as prayed for below.

IX. PRAYER FOR RELIEF

WHEREFORE, Plaintiffs respectfully request that this Court:

A. Issue an order determining that this action may be maintained as a class action under Rule 23 of the Federal Rules of Civil Procedure, that Plaintiffs are proper class representatives, that Plaintiffs' attorneys shall be appointed as Class counsel pursuant to Rule 23(g) of the Federal Rules of Civil Procedure, and that Class notice be promptly issued;

1 B. Certify this action is a class action pursuant to Rule 23 of the Federal Rules of
2 Civil Procedure;

3 C. Appoint Plaintiffs to represent the Classes;

4 D. Appoint undersigned counsel to represent the Classes;

5 E. Enter Judgment in favor of Plaintiffs and the members of the Class against Oracle
6 awarding damages, including punitive damage, and/or nominal damages, to Plaintiffs and the
7 Class members, in an amount according to proof at trial, including interest thereon;

8 F. Enter Judgment in favor of Plaintiffs and the members of the Class against Oracle
9 awarding restitution of Oracle's ill-gotten gains, revenues, earnings, or profits that it derived, in
10 whole or in part, from its unlawful collection and use of Class members' personal data, in an
11 amount according to proof at trial;

12 G. Enter Declaratory Judgment in favor of Plaintiffs and the members of the Class
13 against Oracle pursuant to 28 U.S.C. § 2201 declaring that Oracle's conduct is unlawful as alleged
14 herein.

15 H. Permanently restrain Oracle, and its officers, agents, servants, employees and
16 attorneys, from intercepting, tracking, collecting, or compiling the personal information of Class
17 members as alleged herein;

18 I. Award Plaintiffs and the Class members their reasonable costs and expenses
19 incurred in this action, including attorneys' fees and expert fees; and

20 J. Grant Plaintiffs and the Class members further equitable, injunctive, declaratory,
21 or other relief as the Court deems appropriate.

22 **X. DEMAND FOR JURY TRIAL**

23 Plaintiffs hereby demand a trial by jury of all issues so triable.
